

19. YR-E27(Optional wired controller)

19.1 Interface Display

(1) Standard Version

(2) Simple Version

19.2 Key and Icon

	On/Off key.
	Mode key: Press this key to switch mode.
	Up key: Press this key to adjust temperature in the main interface and other parameter value in other interface.
	Down key: Press this key to adjust temperature in the main Interface and other parameter value in other interface.
	Set key: Press this key to set special functions (ECO, QUIET and TURBO) and also can be combined with other keys for some other function settings.

	Outlet Water temperature display , Error code display
	Clock display , parameter display
	Timer: This icon will be displayed only when timer function is set.
	Six periods of timer
	Timer on/off and display the start time of next period of timer
	Week display
	Error icon
	Child Lock: This icon will be displayed only when child lock function is set.
	Pump: this icon will be displayed when pump is opened.
	On: This icon will be displayed when controller is turned on.

	Off: This icon will be displayed when controller is turned off.
	Energy Saving: This icon will be displayed only when energy saving function is set.
	Quiet: This icon will be displayed only when quiet is set.
	Turbo: This icon will be displayed only when turbo is chosen.
	Auto mode
	Cooling mode
	Heating mode
	Tank mode
	The setting temperature of the tank.
	Heater function
	Defrost icon
	Antifreeze icon
	Lock function
	Check function
	Central function
	Linkage function which is reserved

Note:

1. Setting range:

1) Tank mode: 25°C~75°C (the default is 42°C).

2) Cooling mode of air conditioning: water temperature 5°C~20°C (the default is 9°C).

3) Heating mode of air conditioning: water temperature 25°C~55°C (the default is 40°C).Setting accuracy is 0.5°C.

2. Outlet water temperature display range: 0°C~100°C,display accuracy is 0.1°C.

3. The controller has two kinds of main display interface, standard version and simple version. The simple version has no timer, week, clock.If you want to change the interface,you need to change the DIP switch(SW1-6) of the wired controller, and it will be effective after the system is powered again.

19.3 Operation

(1) Basic function description

Basic function description	Method of operation
ON/OFF	Press the key  to switch on/off the wired controller.
Mode control	In the state of on, press the key  to change mode. Whether there is "tank" mode or not depends on the indoor unit setting.
Adjusting setting temperature	In the state of on, press the key  _{UP} or  _{DOWN} to adjust the setting temperature.

(2) Special function index

Function	Method of operation
Forced to start pump (for debugging)	In the state of off, long press the key  _{SET} for 15 seconds.
Set backlight time	In the state of off, press the key  _{DOWN} and  _{SET} for 5 seconds, 00 (stable lighting) /15S/30S/60S. Adjust the value by pressing the key  _{UP} or  _{DOWN} and confirm by pressing the key  _{SET} .
Timer mode	Press the key  _{SET} for 5 seconds to enter the timer ON/OFF setting, choose ON/OFF by pressing the key  _{UP} or  _{DOWN} and press the key  _{SET} to confirm.
Time setting	Press the key  _{SET} for 10 seconds to enter into time setting function.

Function	Method of operation
Set parameter of timer	In the state of ON, long press the key  _{DOWN} and  _{SET} for 5 seconds to enter.
Check parameters and change functions (for debugging)	When the backlight is on, press the key  _{UP} and  _{SET} for 5 seconds to enter.
Set and cancel child lock	Press the key  _{UP} and  _{DOWN} for 10 seconds to set or cancel.
ECO(default)/QUIET/TURBO	In the state of on, press the key  _{SET} to enter, switch by pressing the key  _{UP} or  _{DOWN} , and confirm by pressing the key  _{SET} again.

Setting special functions

In the state of on, press the key $\frac{\textcircled{Q}}{\text{SET}}$, then switch among ECO ,QUIET and TURBO by pressing Δ_{UP} or ∇_{DOWN} key, finally press key $\frac{\textcircled{Q}}{\text{SET}}$ to confirm.If there is no key is pressed for 10 seconds,it will automatically exit and the previous setting is invalid.

Child lock

Press the key Δ_{UP} and ∇_{DOWN} for 10 seconds to set or cancel child lock. In the state of child lock, all keys are not available.

ON/OFF

Press the key $\frac{\textcircled{Q}}{\text{SET}}$ to switch on /off the wired controller.

Forced to start pump (for debugging)

In the state of off, press the key $\frac{\textcircled{Q}}{\text{SET}}$ for 15 seconds to enter and press the key $\frac{\textcircled{Q}}{\text{SET}}$ for 15 seconds again to exit.

Checking parameters and change functions (for debugging)

When the backlight is on, press the key Δ_{UP} and ∇_{DOWN} for 5 seconds to enter into this function's interface , which is available under the status of on or off.

(Some functions reserved, if the relevant device is not connected in the system, the relevant function code and machine number will not participate in the loop.)

(1) Press the key Δ_{UP} or ∇_{DOWN} to switch the function code, category A (Heat exchange unit)/ B (outdoor unit)/ C (indoor unit-- reserved)/ D (Module control board-- reserved)/ E (slave wired controller -- reserved).

(2) A/B is displayed after the decimal point in the intermediate temperature display area,function code(00-FF) is displayed in the lower right corner.00-3F can be viewed and changed,while 40-FF can only be queried.The specific parameters are displayed in the upper right corner.

(3) Switch the function code by using the Δ_{UP} or ∇_{DOWN} key. If the function code is flashing,which means that it can be queried and can be changed.And if the function code is still,which means that it can only be queried. When the function code is flashing, press the $\frac{\textcircled{Q}}{\text{SET}}$ key to make the function code still,.Meanwhile, the parameter value flashes to indicate that it can be changed. You can adjust the value by the Δ_{UP} or ∇_{DOWN} key. After adjustment, press the $\frac{\textcircled{Q}}{\text{SET}}$ key again and the parameter value will not flash. And the function code flashes, indicating that the previous layer operation is returned. If there is no operation for over 10 seconds, or press the SET key in the state of viewing the parameter (when function code is 40-7F), exit the parameter viewing and setting interface. And you can also exit this interface by pressing on/off key.

(4) If there is no reply from the air-condition, theparemeter display will be “--”. If the communication returns that defrost, check or antifreeze is running, relevant icon will dispaly

Category	Function code	Function description	Set/ Query
A	00	ON/OFF	Can be queried and set
A	01	Setting mode	Can be queried and set
A	02	temperature setting	Can be queried and set
A	03	Temperature compensation	Can be queried and set
A	04	Electric heating	Can be queried and set
A	05	Pump	Can be queried and set
A	06	Centralized controller group number	Can be queried and set
A	07	Rust prevention operation	Can be queried and set
A	08	Floor dry	Query only
A	09	Check 1	Can be queried and set
A	0A	Check 2	Can be queried and set
A	0B-3F Reserved	Reserved function, does not participate in the loop when the function code loops	Can be queried and set
A	40	Type of heat exchange unit	Query only
A	41	Operation mode	Query only
A	42	Antifreeze	Query only

B	59	Temperature of Toil	Query only
B	5A	Compressor module temperature	Query only
B	5B	Compressor current	Query only
B	5C	Compressor DC voltage	Query only
B	5D	Cumulative running time	Query only
B	5E	Continuous running time	Query only
B	5F	Program version number	Query only
B	60	E2 version	Query only

Category	Function code	Function description	Set/ Query
B	61	Historical error 1 of outdoor unit	Query only
B	62	Historical error 2 of outdoor Unit	Query only
B	63	Historical error 3 of outdoor Unit	Query only
B	64-FF Reserved	Reserved function, does not participate in the loop when the function code loops	Query only

(5) Timer

Note: This function is not available when the dial code is simple.

In the on state, press the key  and  for 5 seconds to enter this function interface.

The default values are as follows

Week icon	Time period	Default start time	Default switch	Default temperature
		6:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
		8:00	OFF	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
		12:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
		13:00	OFF	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
		18:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
		22:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
		8:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
		9:00	OFF	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
		12:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.

Week icon	Time period	Default start time	Default switch	Default temperature
SAT	4	13:00	OFF	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
SAT	5	18:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
SAT	6	22:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
SUN	1	8:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
SUN	2	9:00	OFF	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
SUN	3	12:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
SUN	4	13:00	OFF	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
SUN	5	18:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.
SUN	6	22:00	ON	Cooling mode: 9°C; Heating mode: 40°C; Hot water: 42°C.

After entering the setting interface, the week display area displays the week character, and the time period value is displayed above it.

You can switch between the time periods by using the UP and DOWN keys. You can also quickly switch between weeks by pressing the MODE key.

In the display state of a certain period of time, press the SET key to enter the parameter settings. You can switch the hour, minute, on/off, and temperature by the MODE or SET key. Switch to the corresponding position, its parameters flashing, indicating that it can be changed. Using the up and down keys to change its parameter value. Pressing the mode or set key to switch will save the previous settings.

If there is no operation for 10 seconds or if the ON/OFF key is pressed, the function will be exited and the last changed parameter will not be saved.

19.4 Week and clock function settings

Note: This function is not available when the dial code is simple.

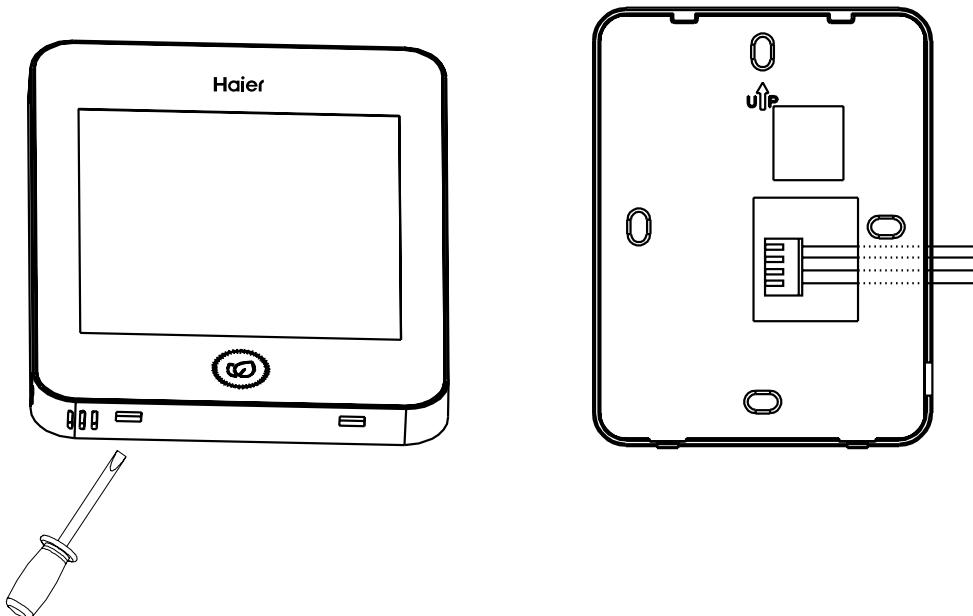

Enter the week and clock setting by pressing and holding the  key for 10 seconds. After you enter this function, **CLOCK** icon and the current value in **MON TUE WED THU FRI SAT SUN** flashes, pressing UP and DOWN keys to change the week value. By pressing the  key to switch to the hour setting, the hour value flashes at this time, you can change the parameter by the UP and DOWN keys. Then press the  key to switch to the minute setting, the minute value flashes, you can change the minute value by using the UP and DOWN keys and press the  key to confirm the change. If there is no operation for 10 seconds, the function will be exited and the last changed parameter will not be saved.

19.5 Dip switch

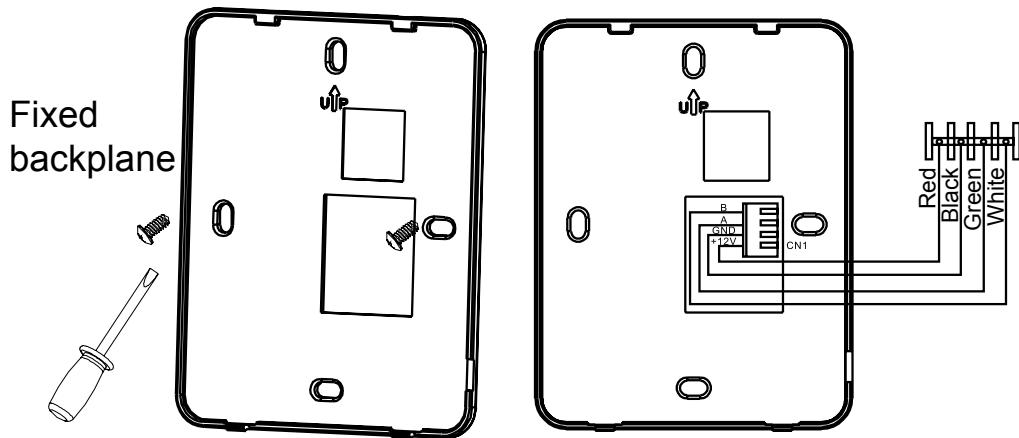

SW1	Definition content	Specific definition
1	Reserved	Reserved
2	Whether to display the outlet water temperature	ON -- do not display OFF -- display
3	Whether it is the demo version	ON -- demo version OFF -- Non-demo version
4	Single cooling	ON -- Single cooling OFF -- normal
5	Single heating	ON -- Single heating OFF -- normal
6	Simple	ON -- simple OFF -- normal
7	Reserved	Reserved
8	Reserved	Reserved

19.6 Wired Controller Wiring Instruction

- First, put communication wire through the hole in the backplane.

2. Fix backplane and then connect communication wire to CN1 port of wired controller. Finally put the front cover of wired controller to backplane to complete the installation.

20. Error Code

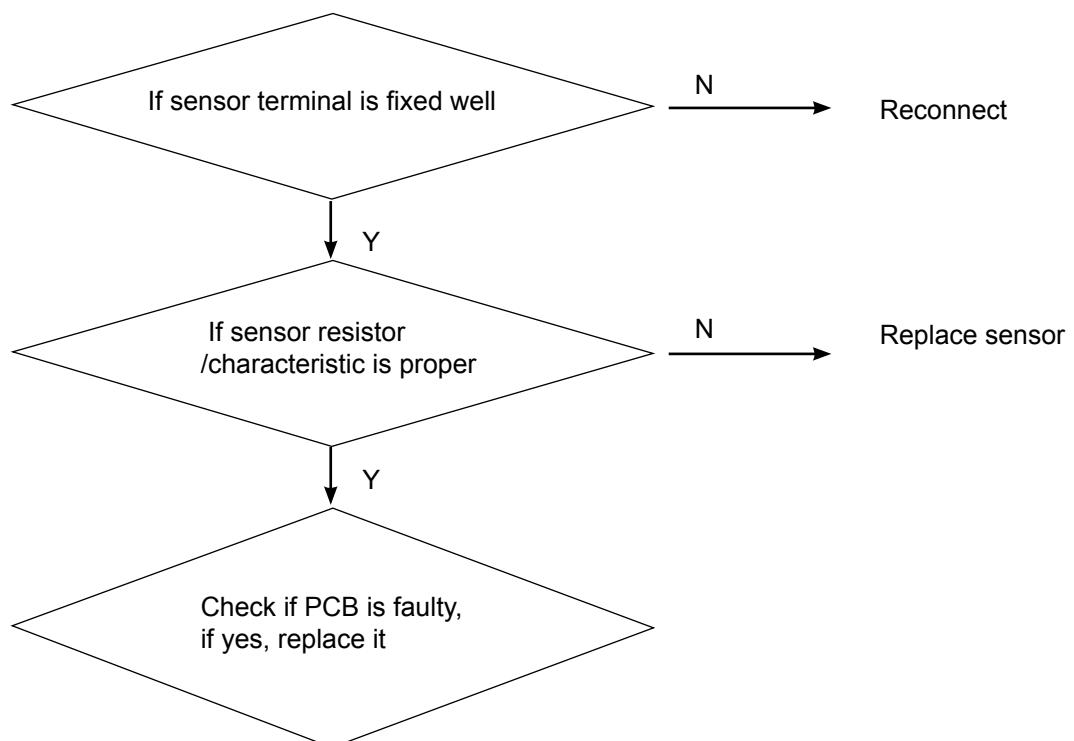

Error code	Error code definition	Notes
1	In water temp.sensor(Twi)failure	Restorable
2	Out water temp.sensor(Two)failure	
3	In refrigerant temp.sensor(Thi)failure	
4	Out refrigerant temp.sensor(Tho) failure	
7	Communication fault with wired controller	
10	Flow rate too low failure	Restorable, 3 times fault an hour lock
15	Antifreeze fault	
16	Heat exchange unir HU in/out water remp. too high	Restorable
20	Defrosting temp.sensor(Te)failure	
21	Ambient temp.sensor(Ta)failure	
22	Suction temp.sensor(Ts)failure	
23	Discharging temp.sensor(Td)failure	
28	High pressure sensor failure	Restorable, 3 times fault an hour lock
29	Low pressure sensor failure	
30	High pressure switch HPS failure	
34	Discharging temp. too high protection(Td)	
35	4-way valve reversing failure	
38	High pressure too low protection(Pd)	Restorable, 3 times fault an hour lock
39	Low pressure too low(Ps)/compression ratio too high protection	
40	High pressure too high protection(Pd)	
43	Discharging temp. too high protection(Td)	
46	Discharging communication fault with IGBT Power Moudule	Restorable
71	DC FAN failure	Restorable, 3 times fault an hour lock
75	High-low differential pressure too small/no differential pressure	
82	Compressor current protection	
83	Outdoor unit model BM setting error	
110	Module hardware excess current	
111	Compressor out of step	Restorable
117	Software excess current	

When the screen of wire controller display hereinafter code, the unit is standby. Please check the parameters according to standby reason.

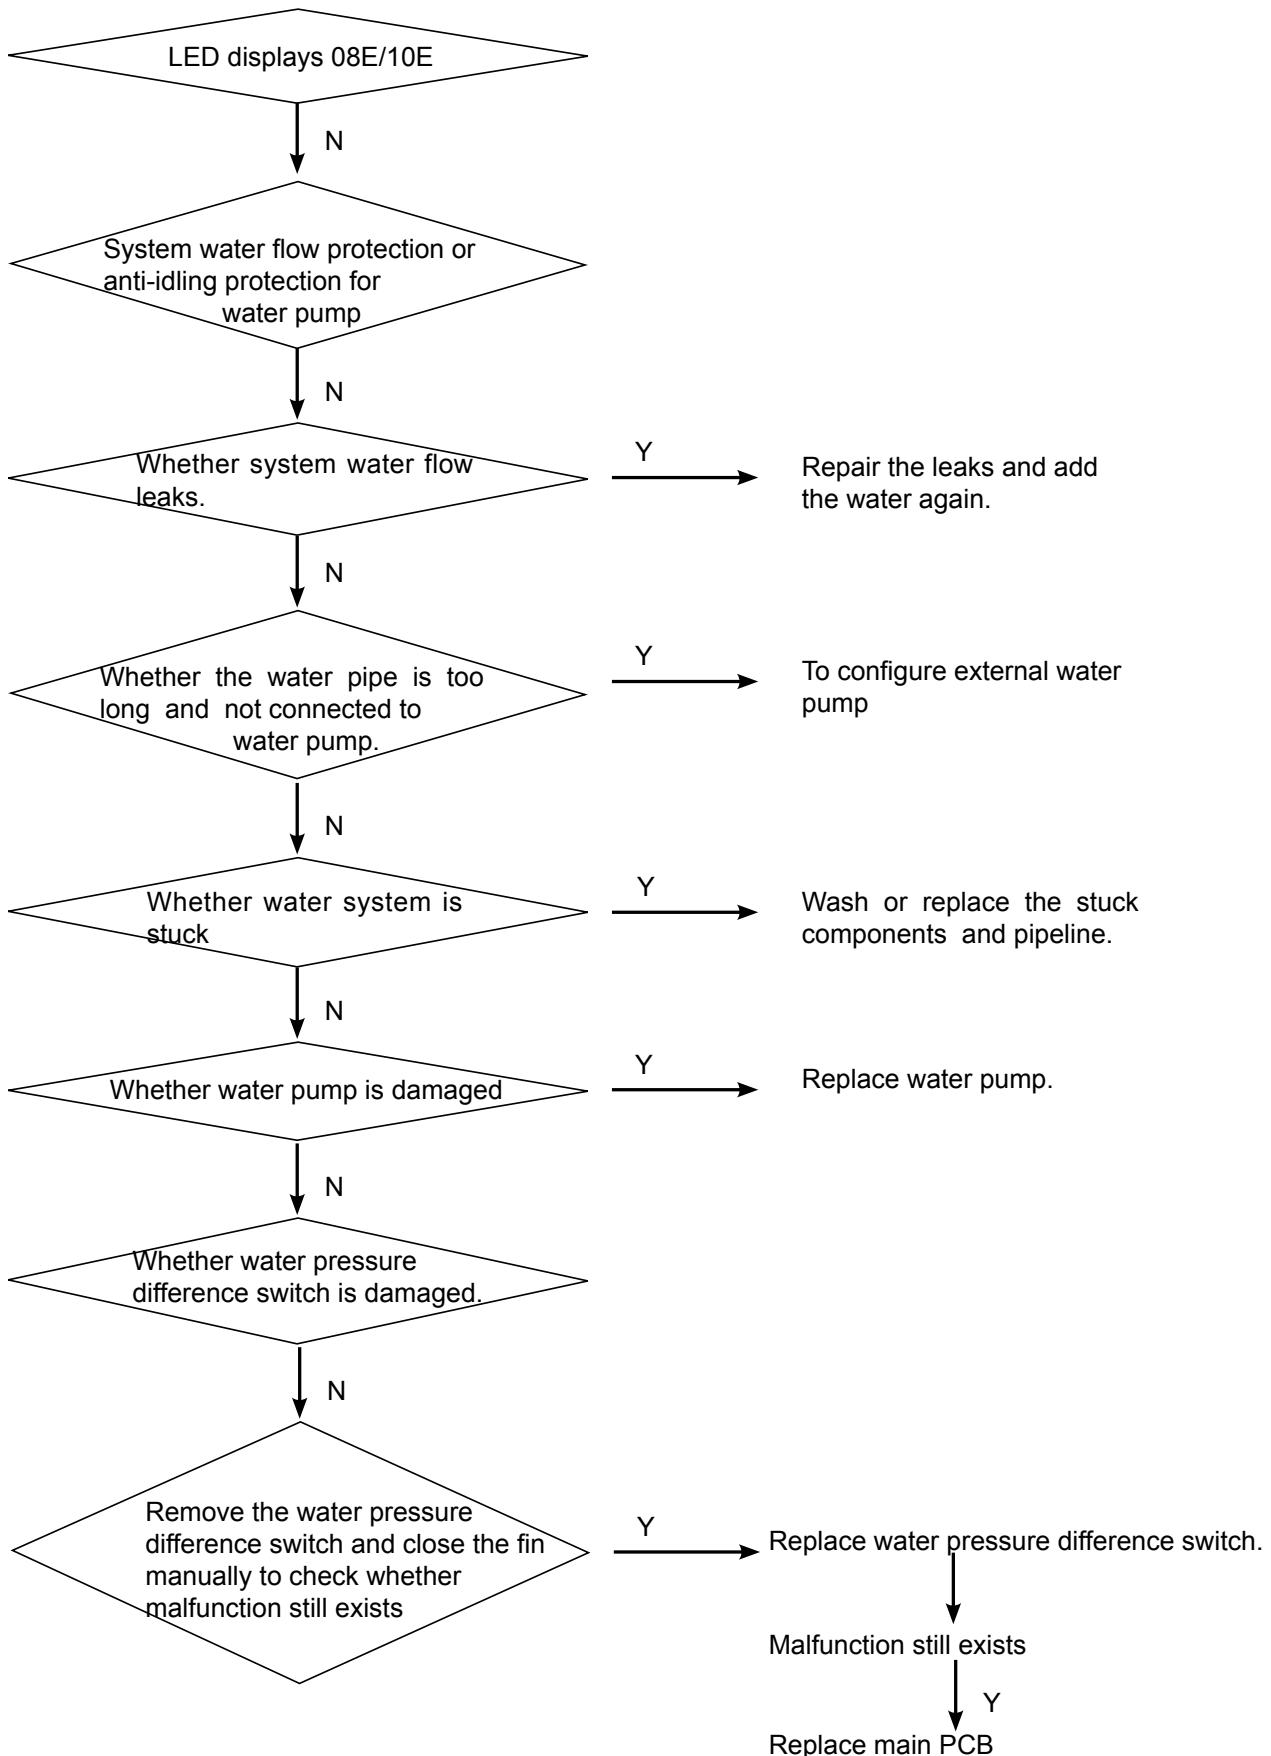

Standby code	Standby reason	Notes
555.1	Outer circumstance temp.Ta>27°C heating standby	Restorable
555.3	Outer circumstance temp.Ta>54°C or Ta<-10°C, refrigerantion standby	
555.4	Oil temp. fail to meet the condition of system start	
555.5	Outdoor unit mode don't match with indoor unit mode ,outdoor unit setting single cold single heat mode conflicted with indoor unit mode cause to standby	

21. Troubleshooting

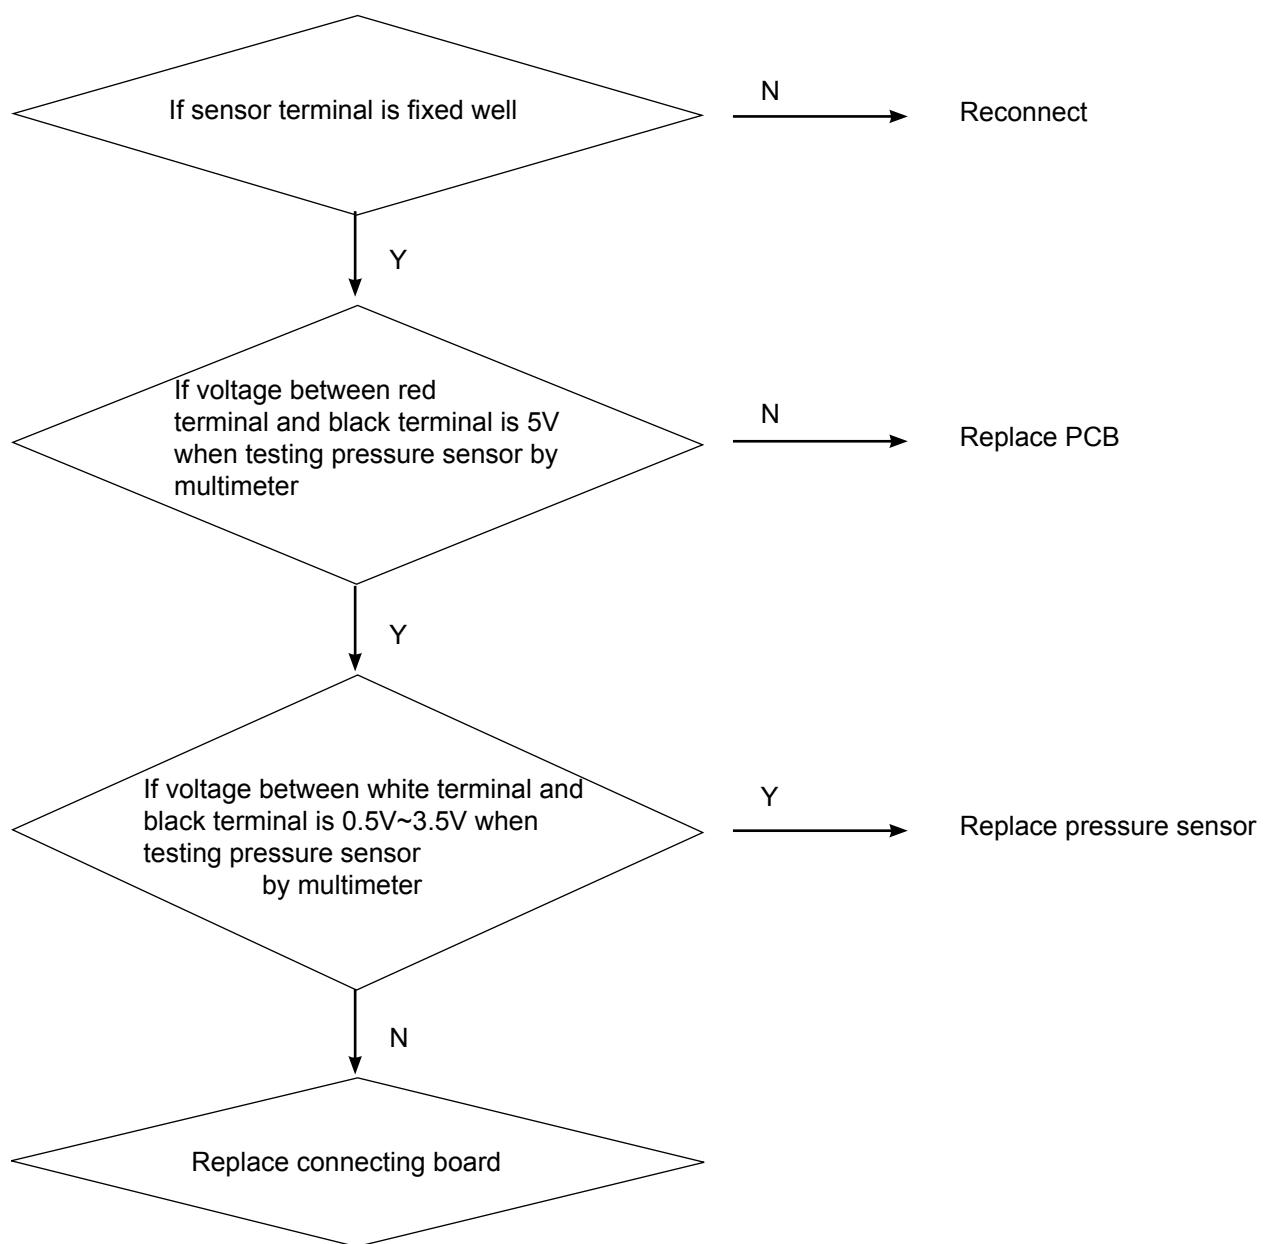

[1,2,3,4 ,20-24,69] Temperature sensor failure

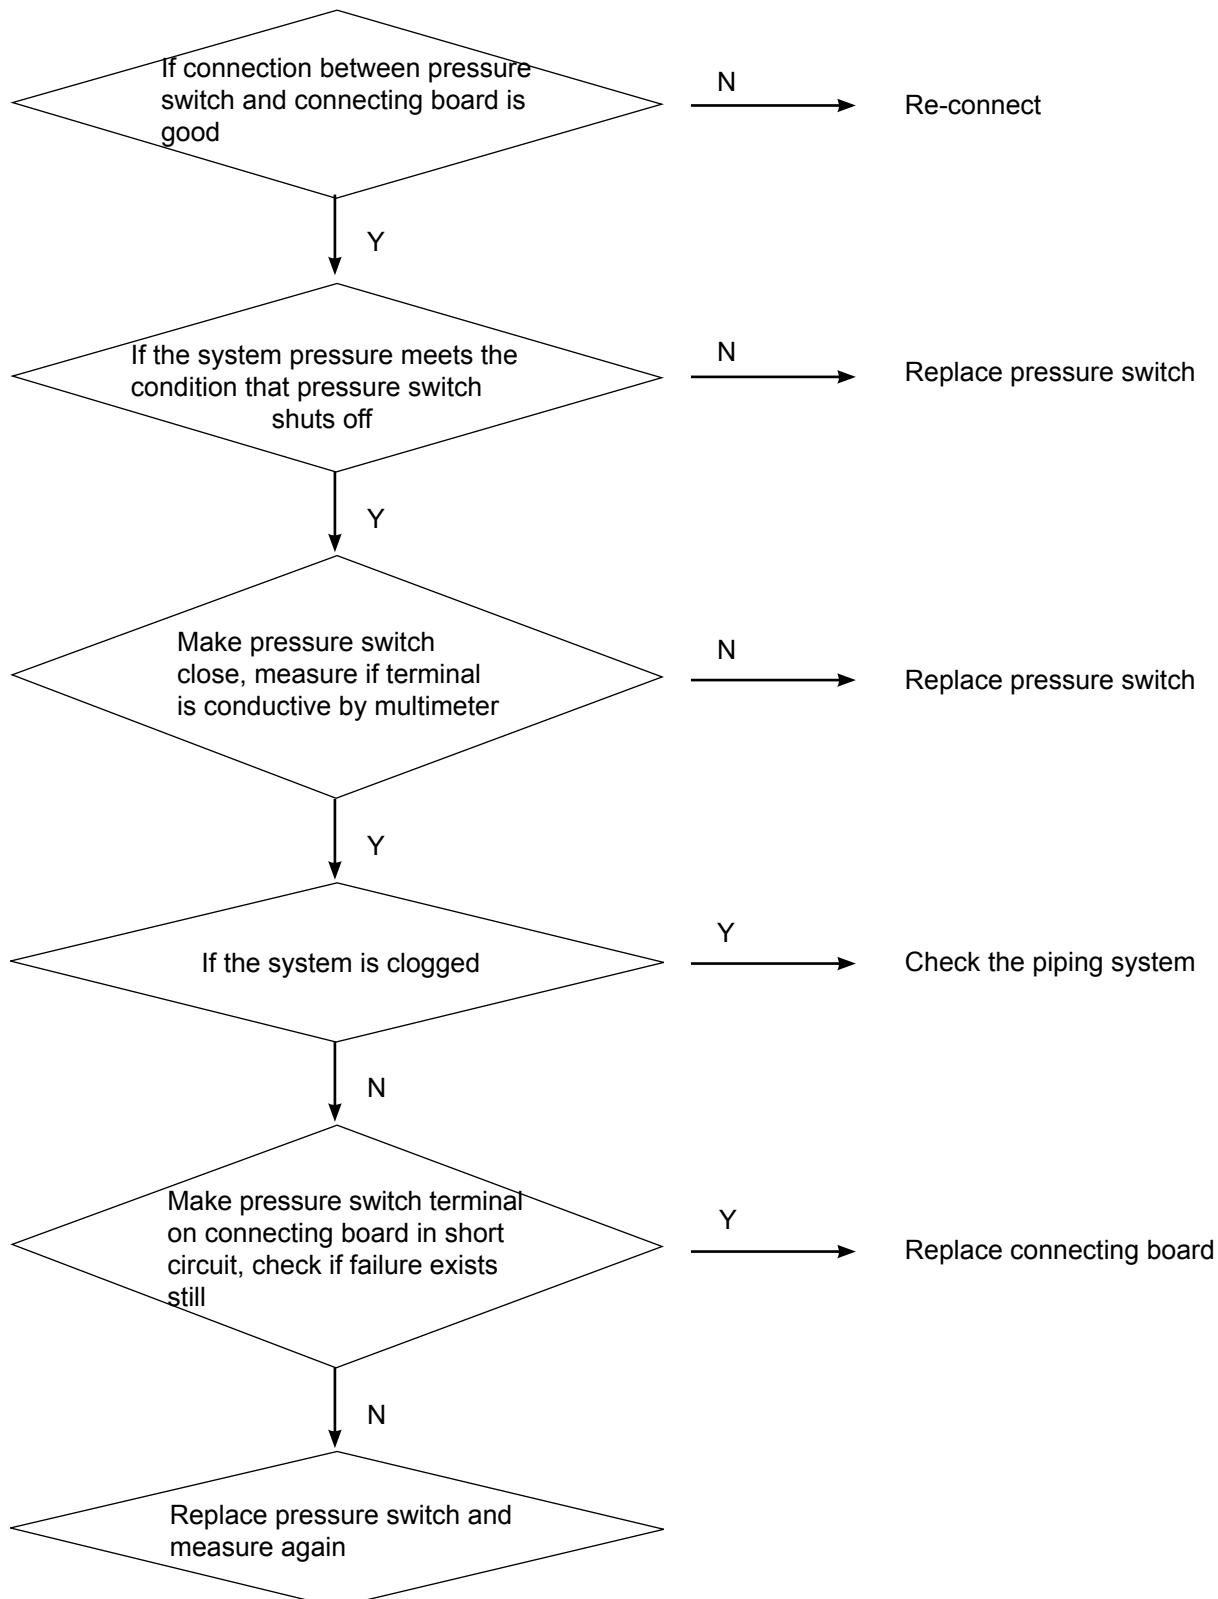

08,10: System water flow protection

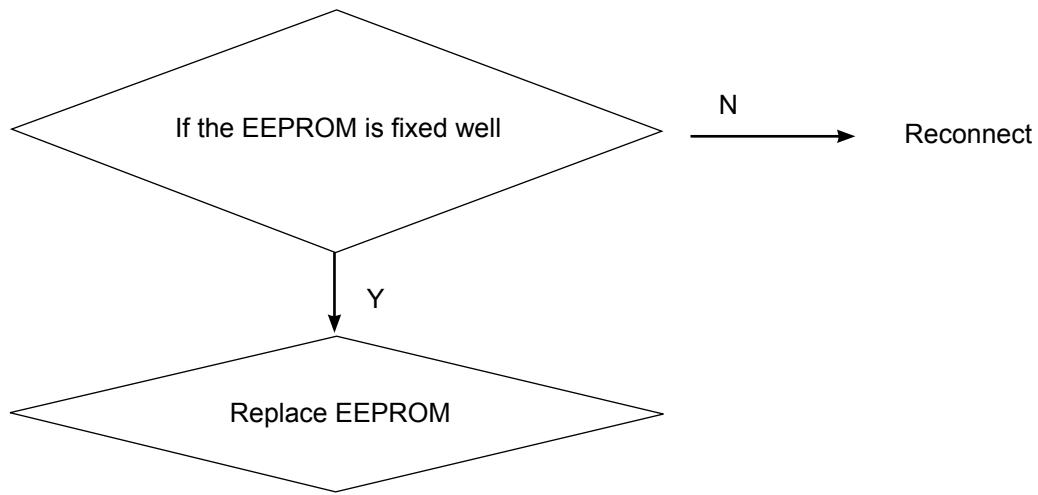

[28, 29] High/low pressure sensor failure

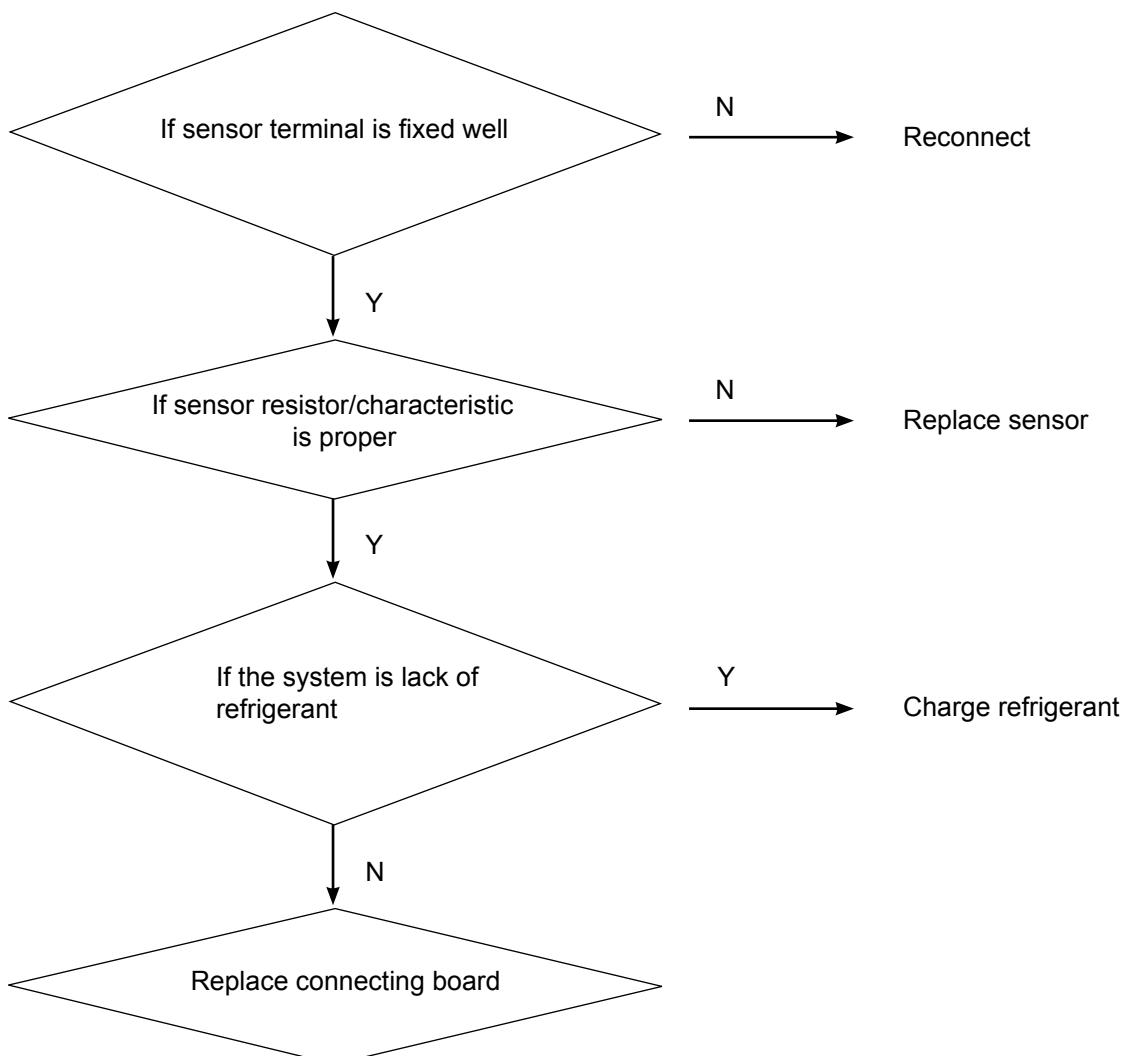

[30] High pressure switch failure

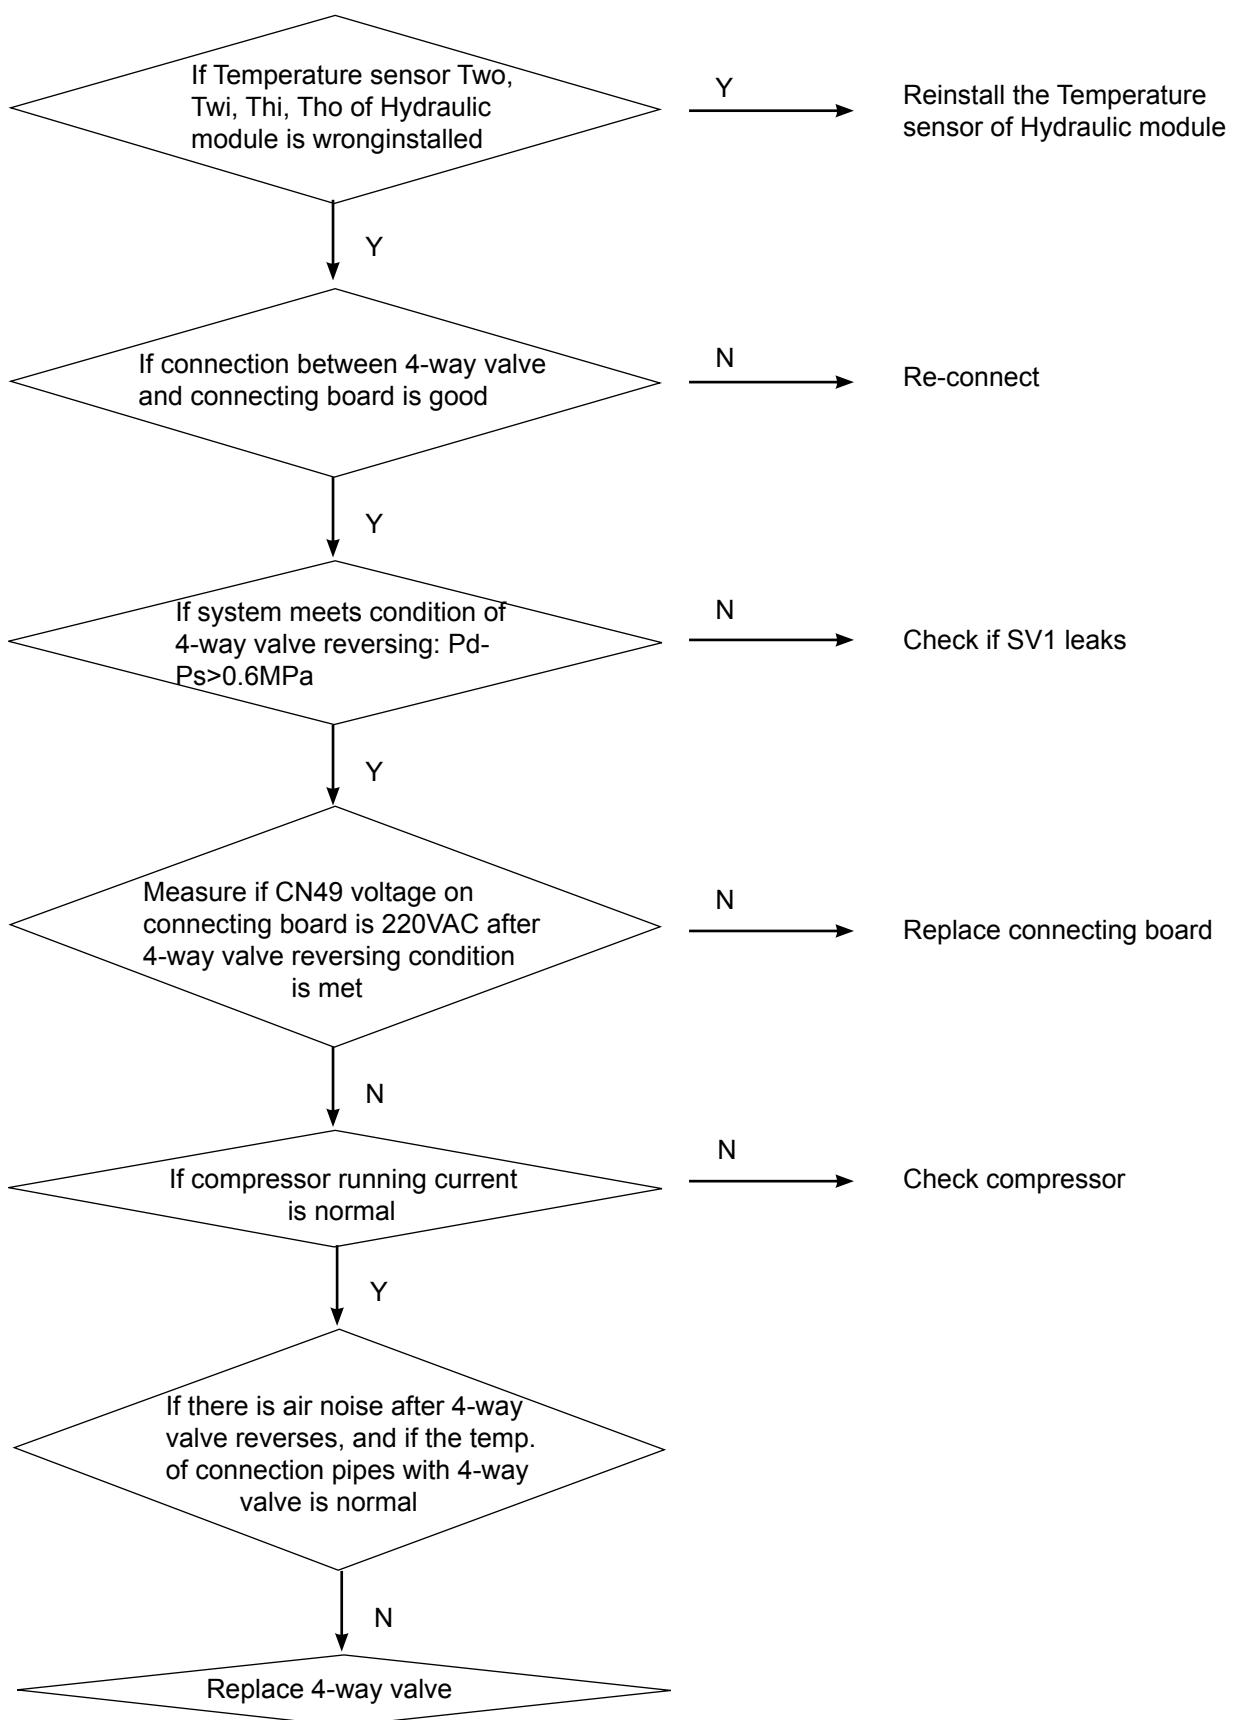

[33] Outdoor EEPROM failure

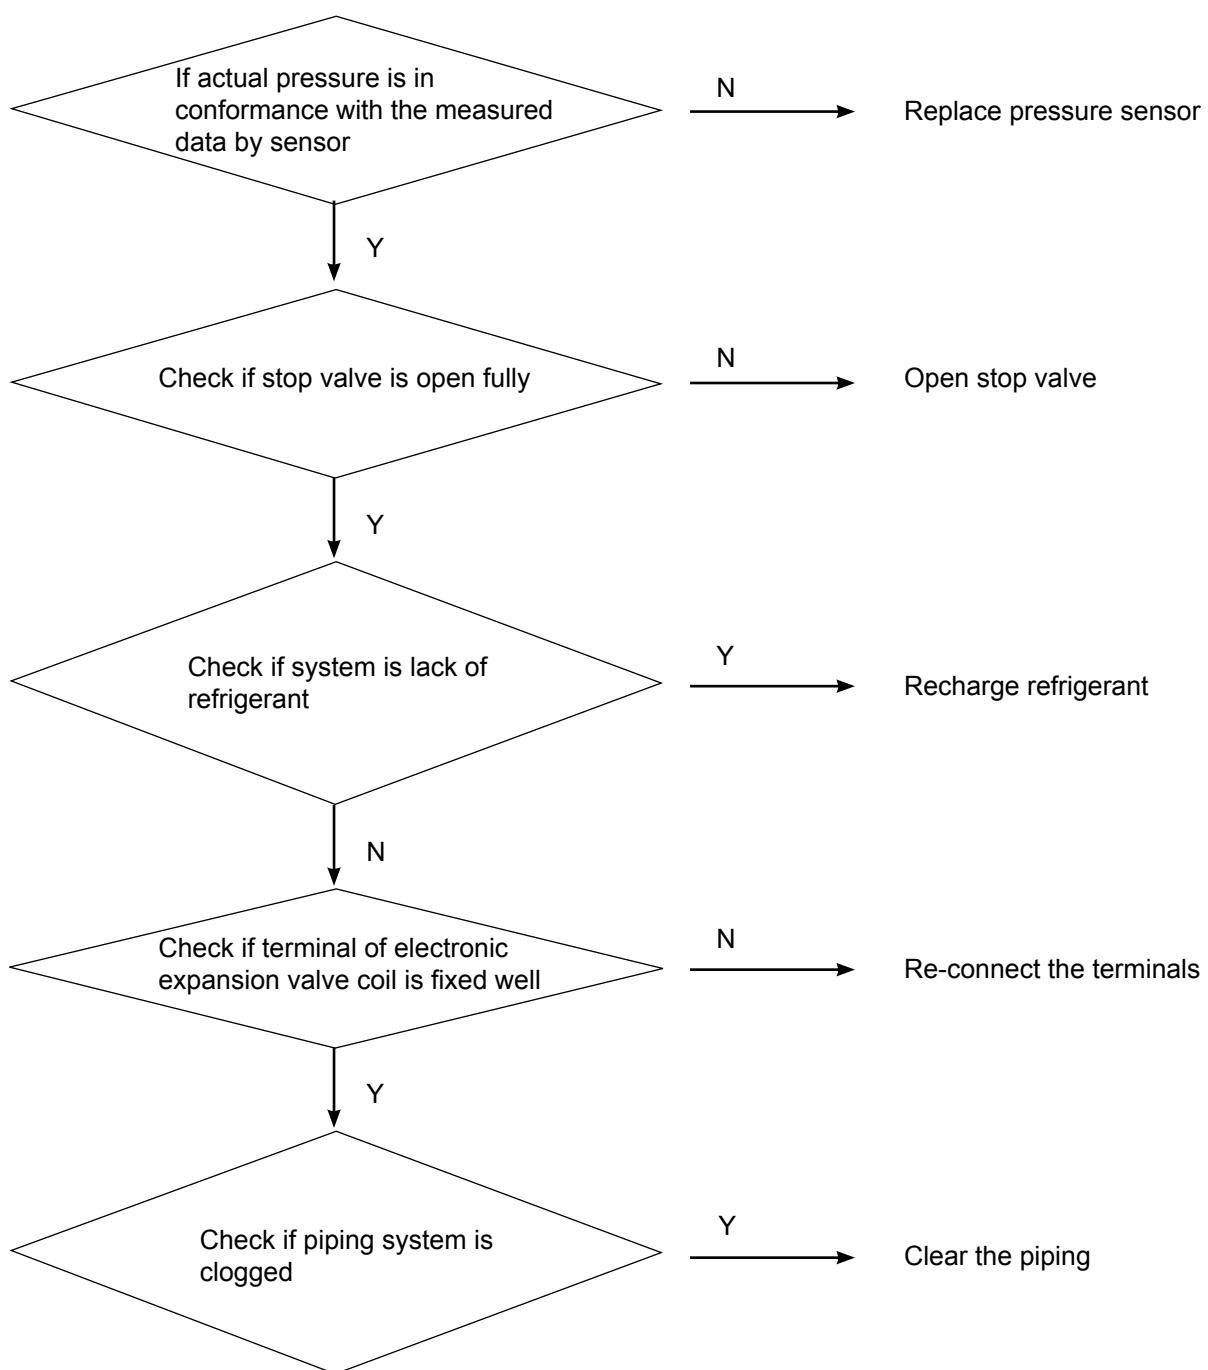

[34] Protection of discharging temp. too high

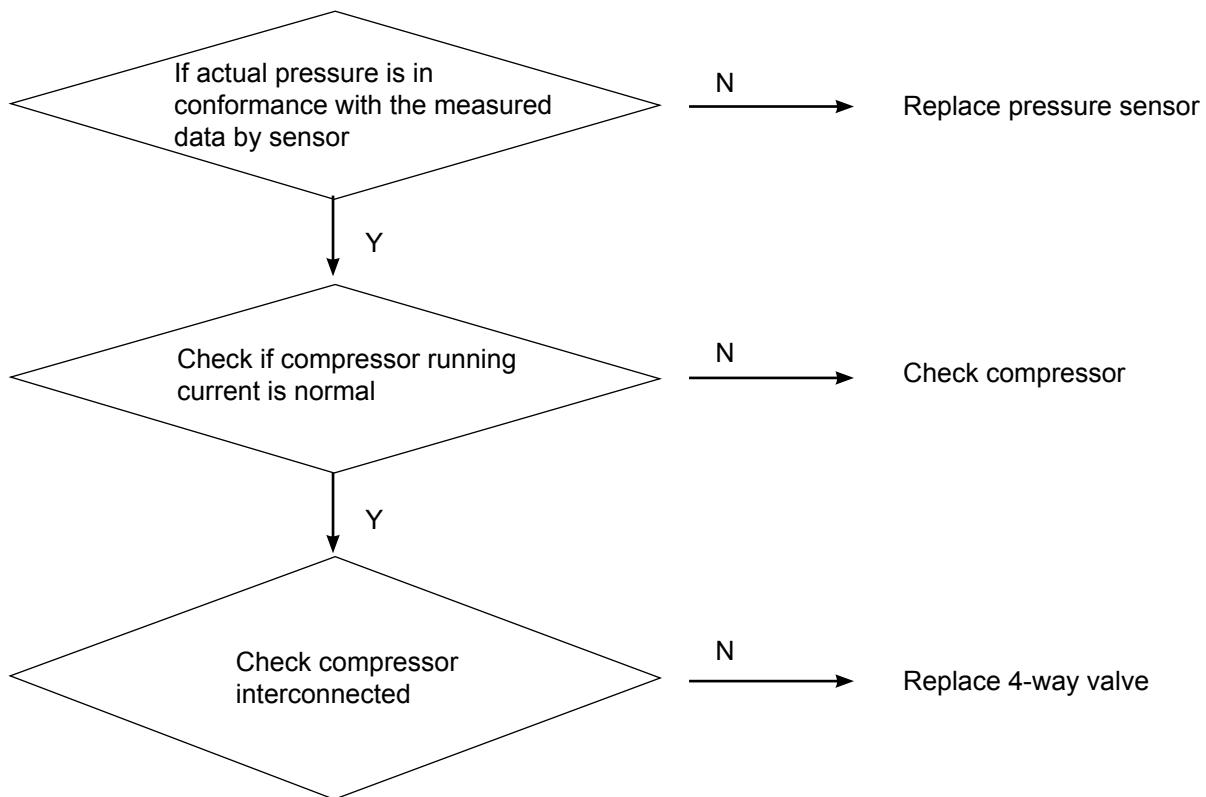

[35] 4-way valve reversing failure, or Temperature sensor Two, Twi, Thi, Tho of Hydraulic module is wrong installed

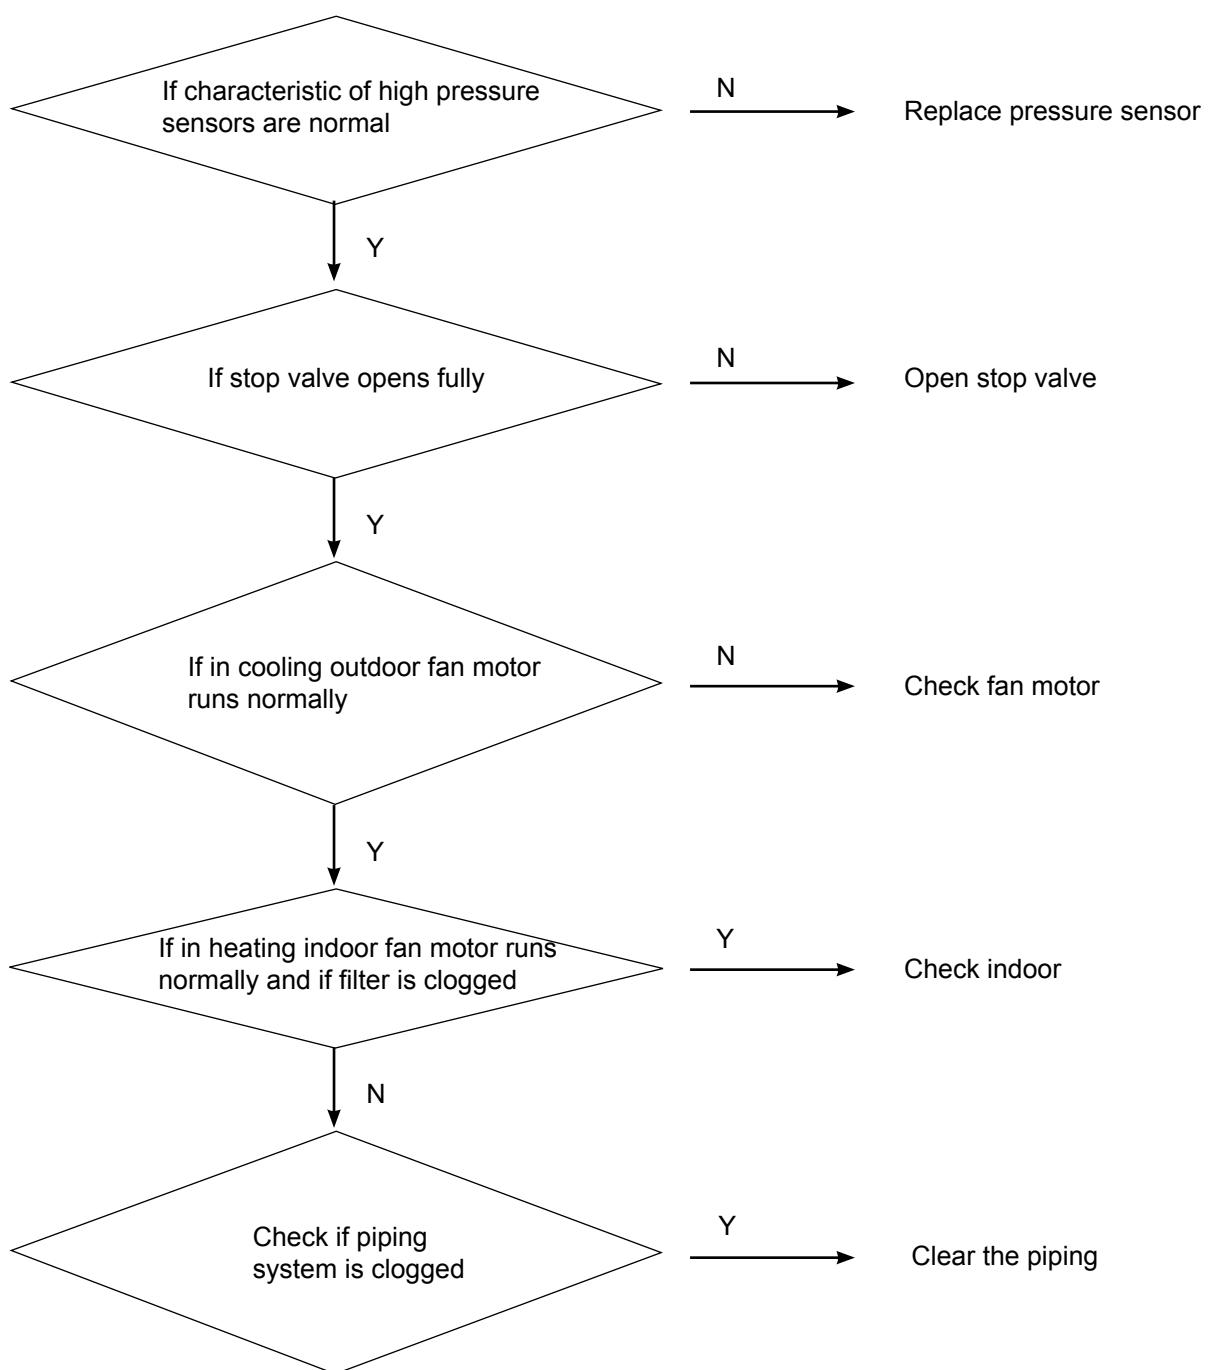

[39-0, 39-1] Low pressure too low and compression ratio too high

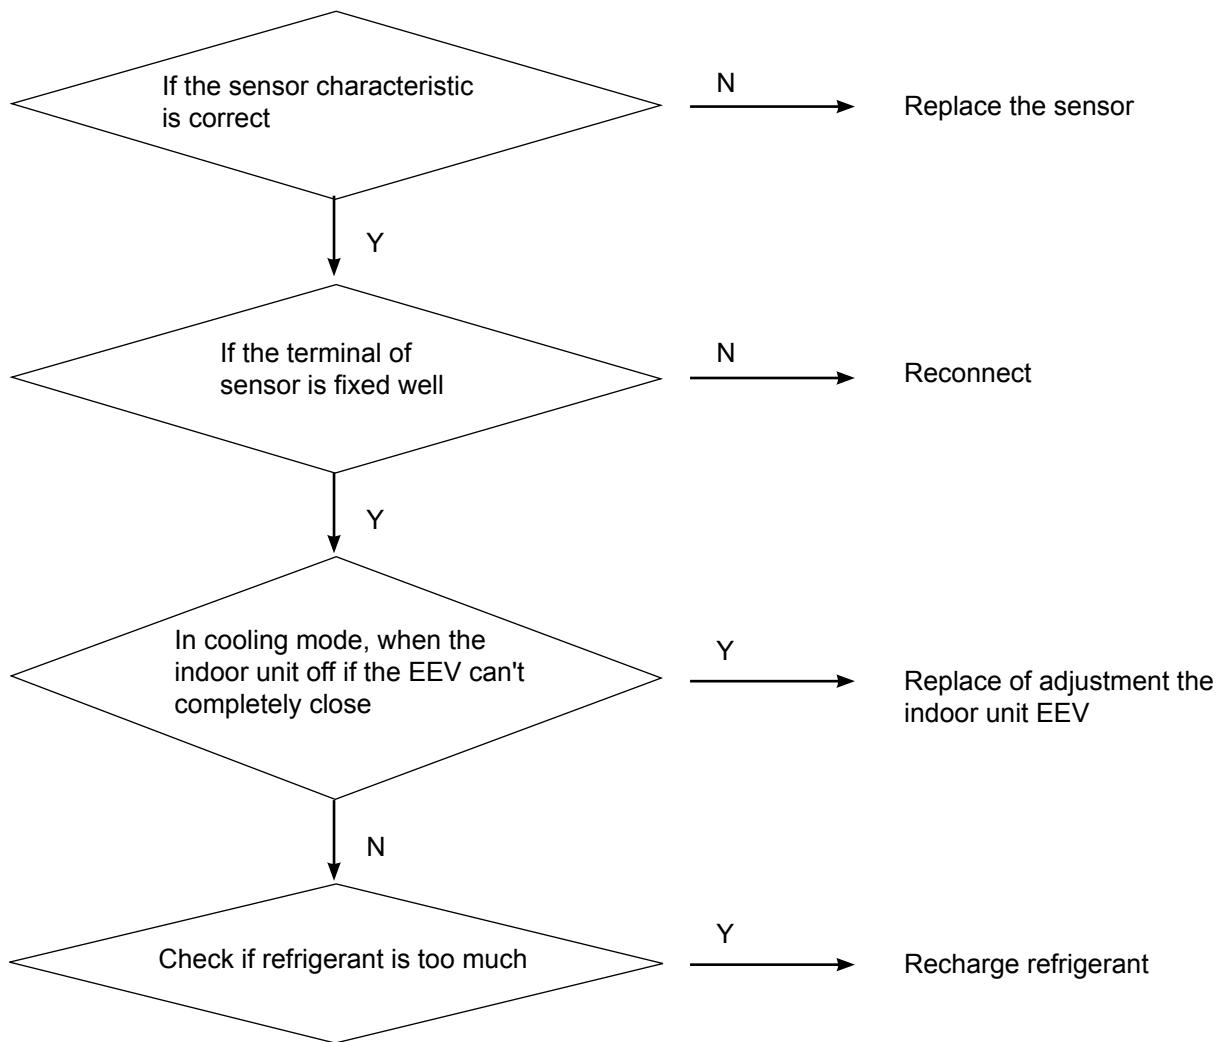

[39-2] Compression ratio too low

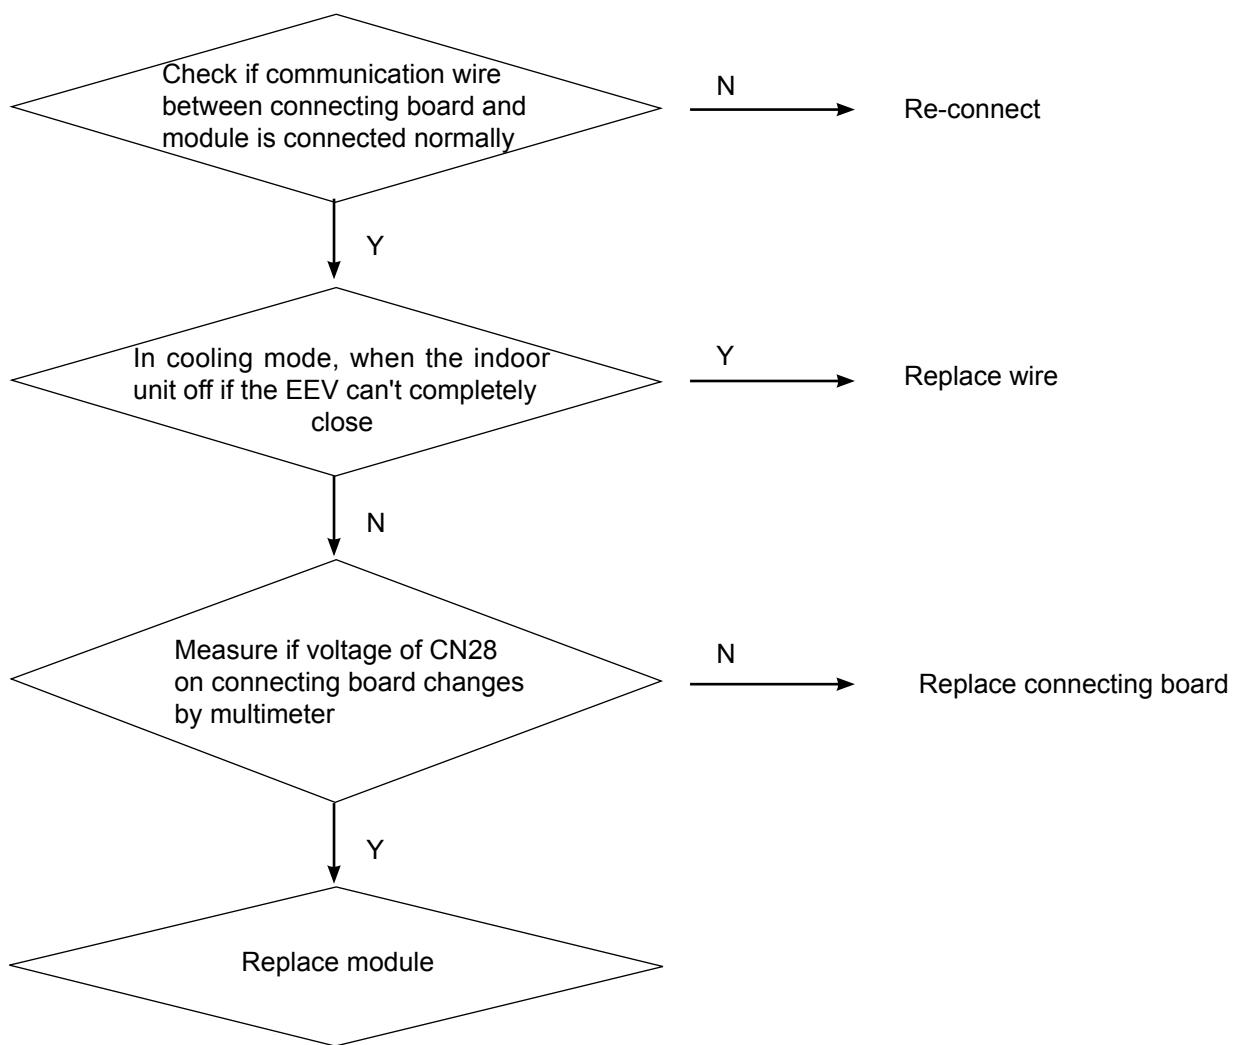

[40] High pressure too high failure

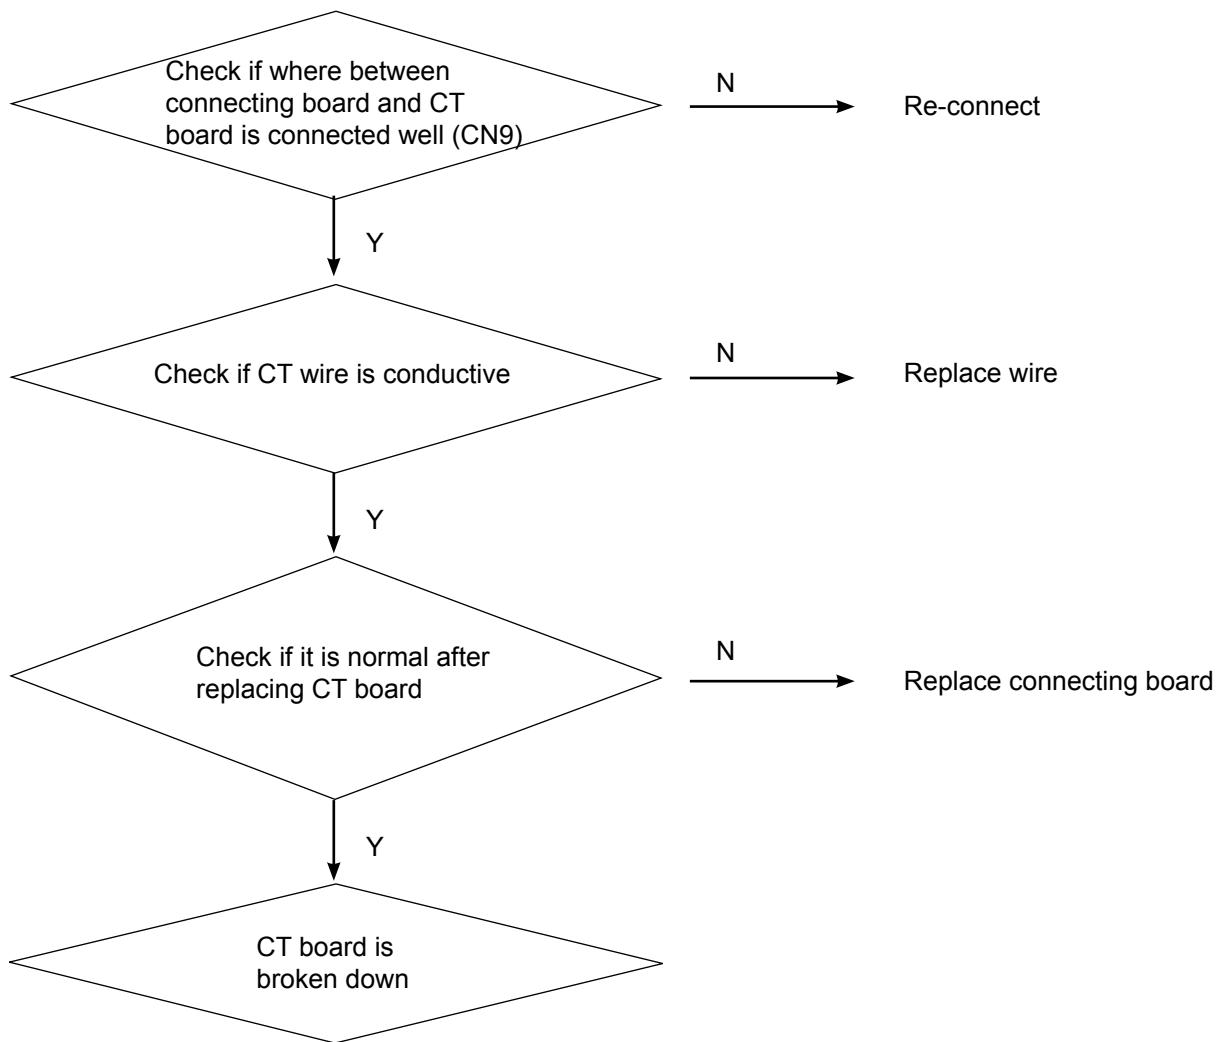

[43] Discharging temp. sensor Td too low protection

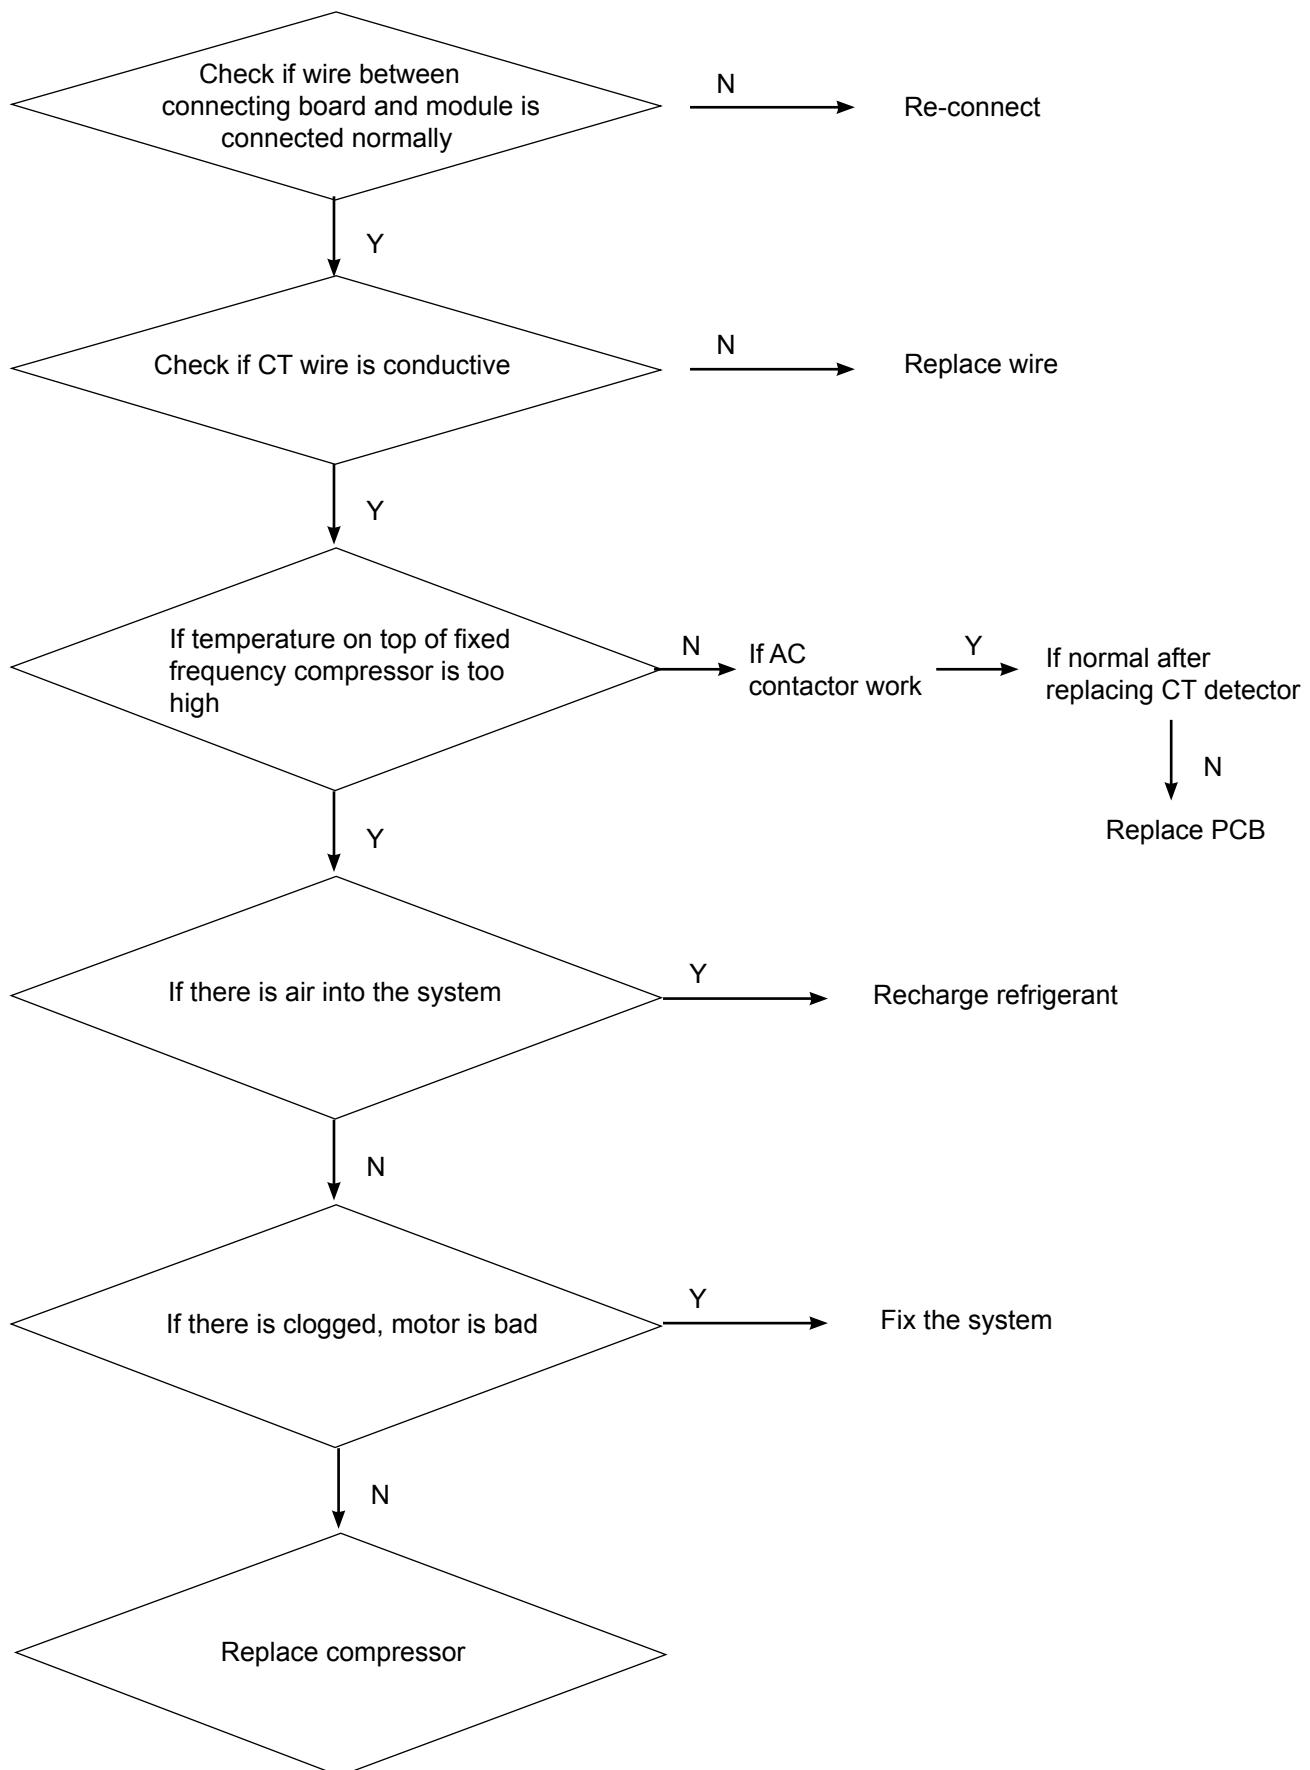

[46] Communication with inverter module failure

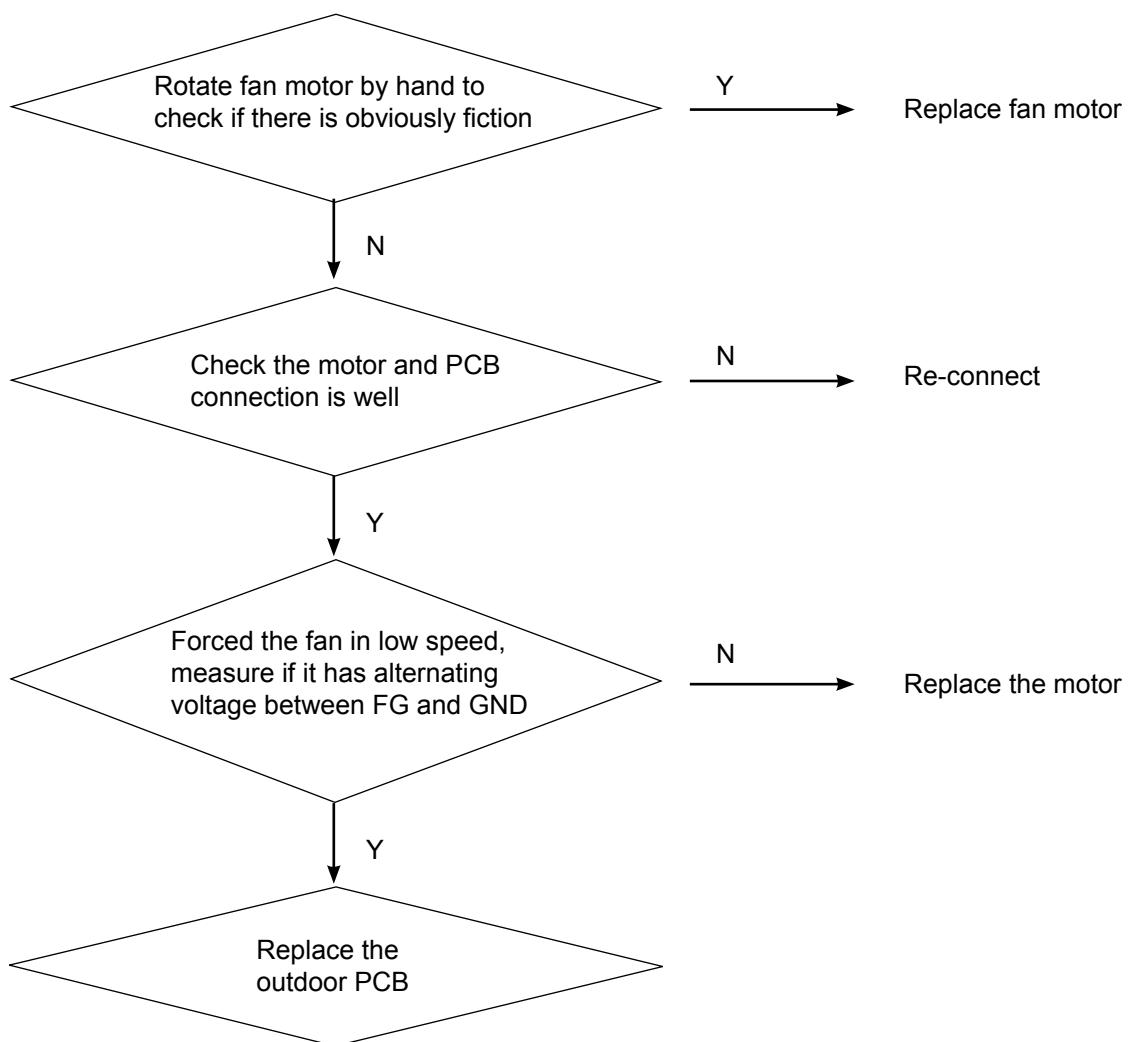

[53] CT Current too low or current sensor failure

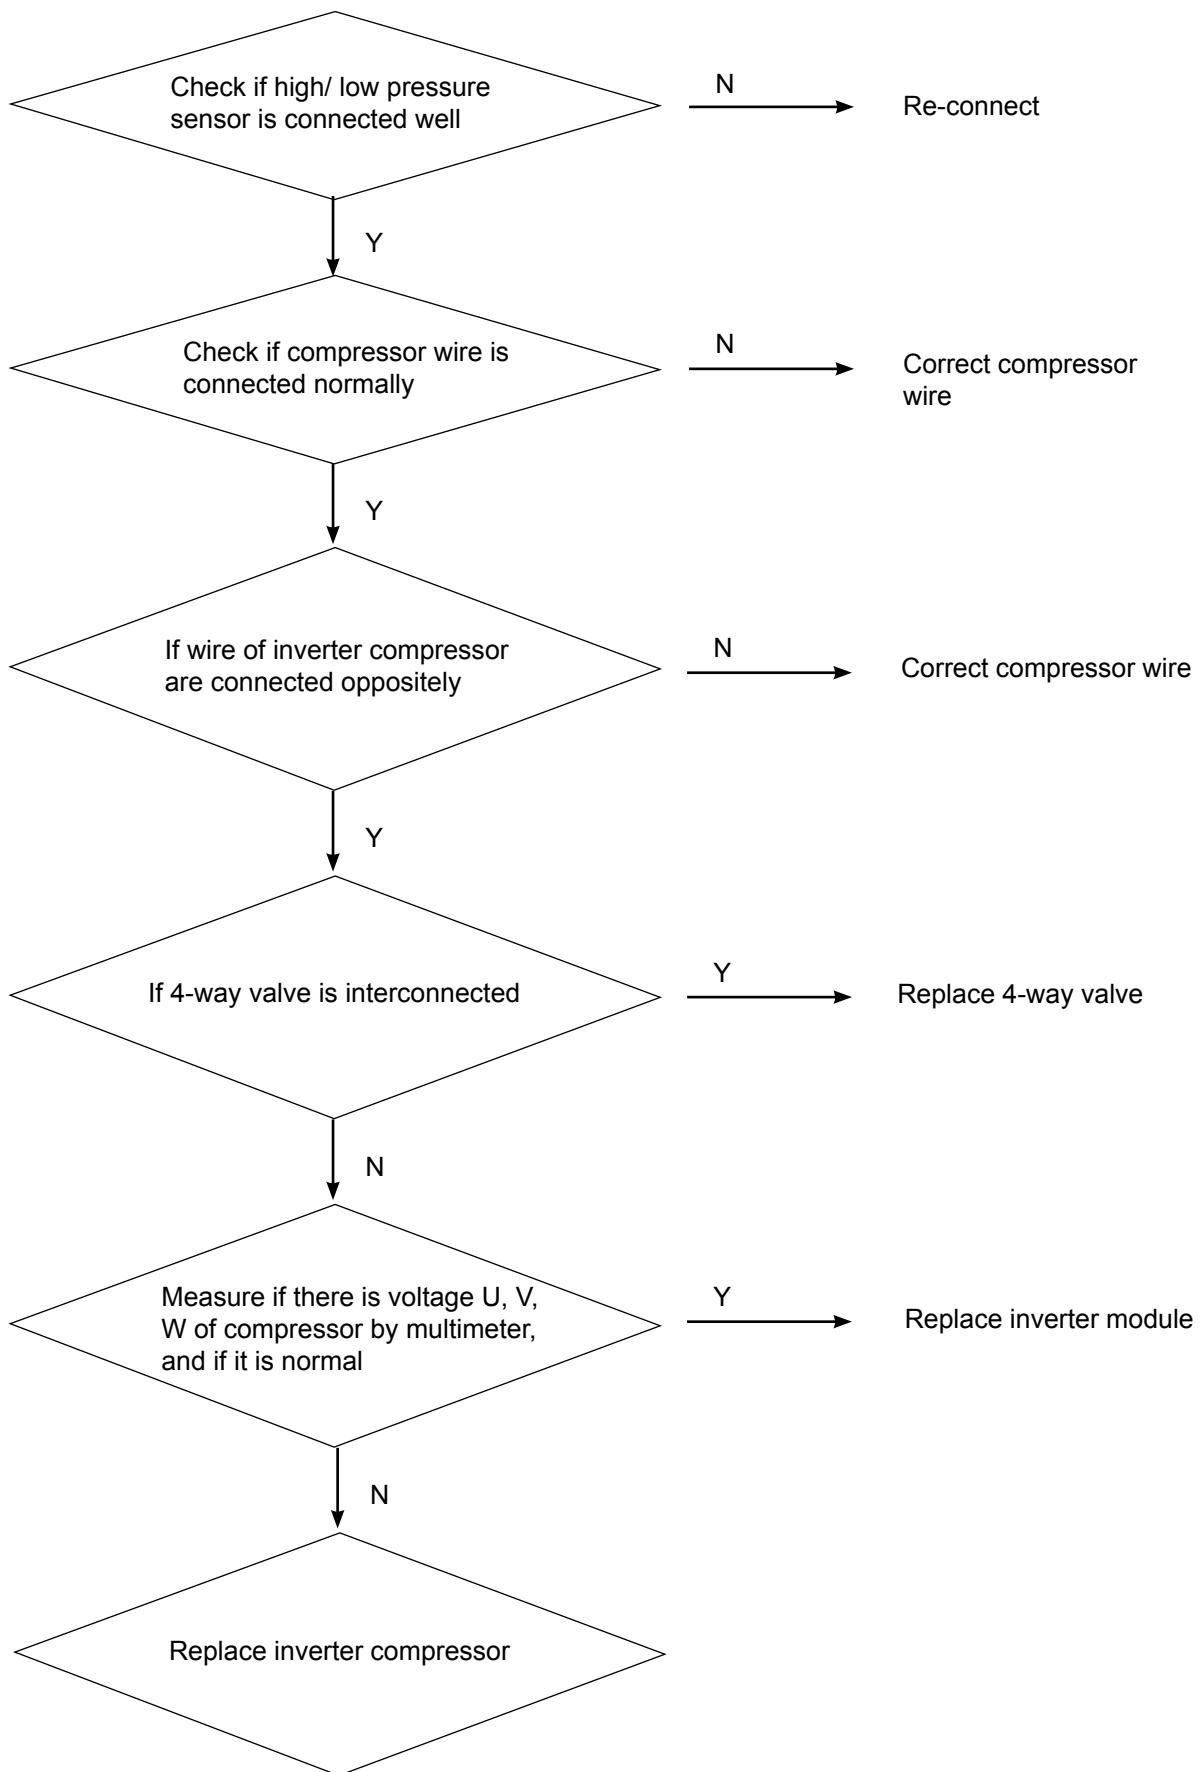

[64] CT current too high

[71-0,71-1] DC motor blocked

[75-0, 75-4] Pressure difference between high pressure and low pressure is abnormal

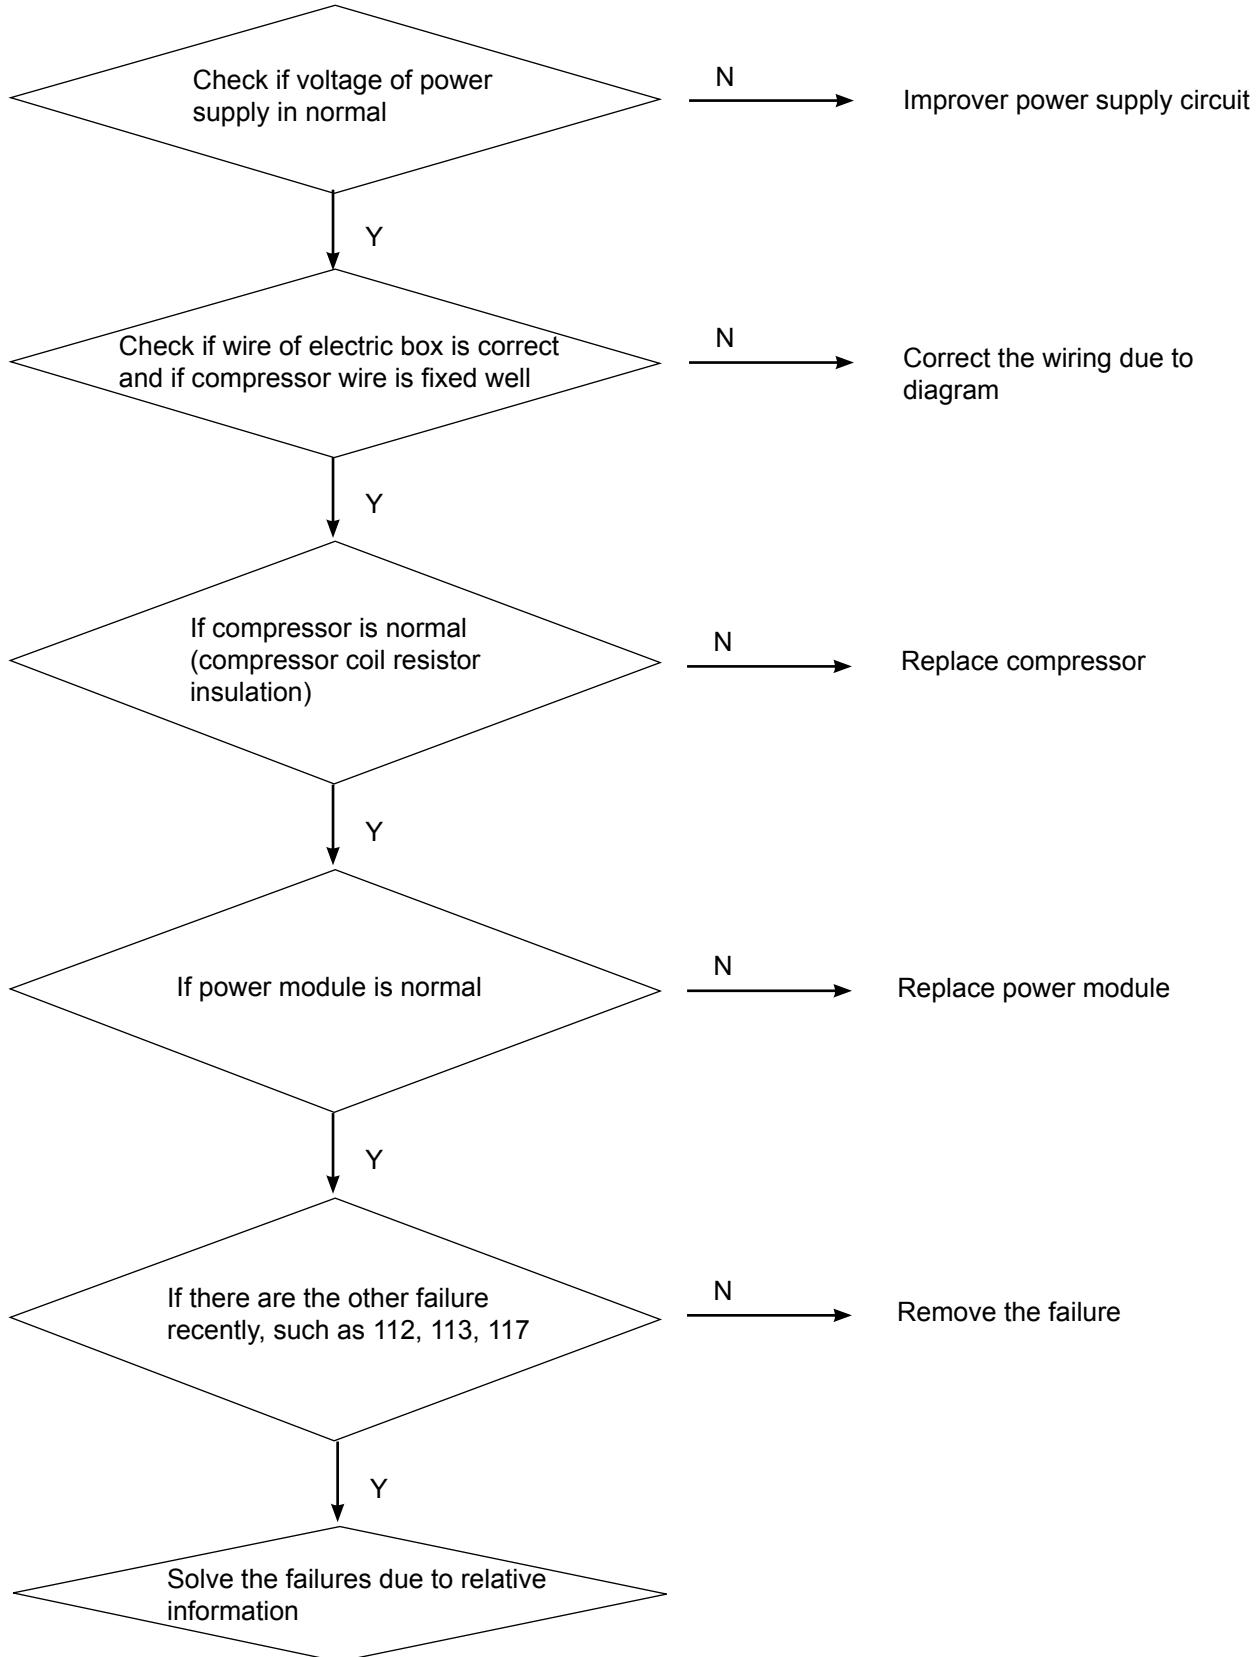

[82] Compressor current protection

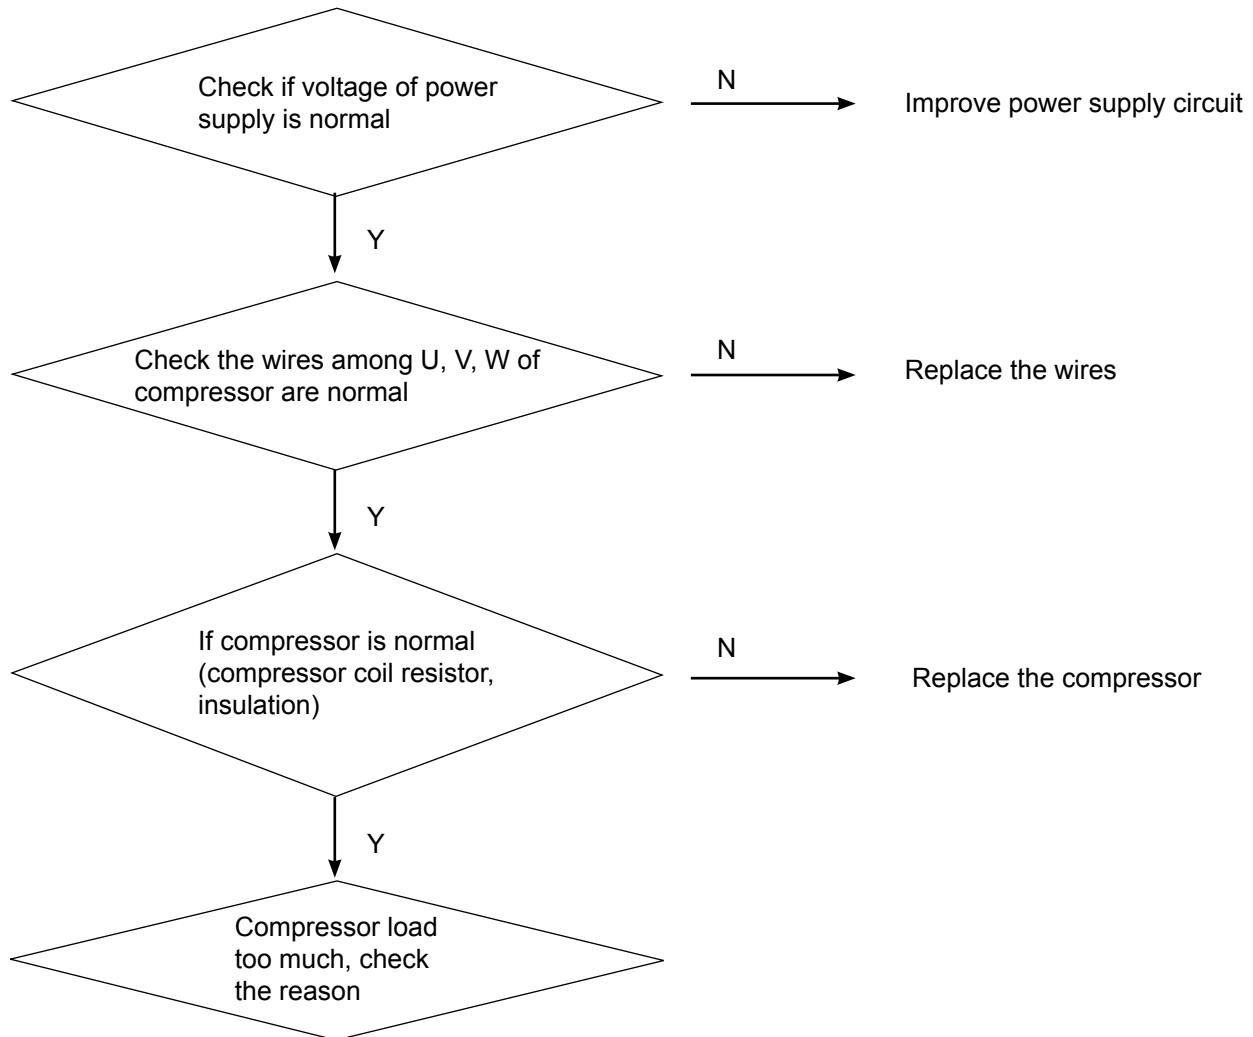

[108] Transient over current in IPM module rectifier side software

[110] IPM module hardware over current

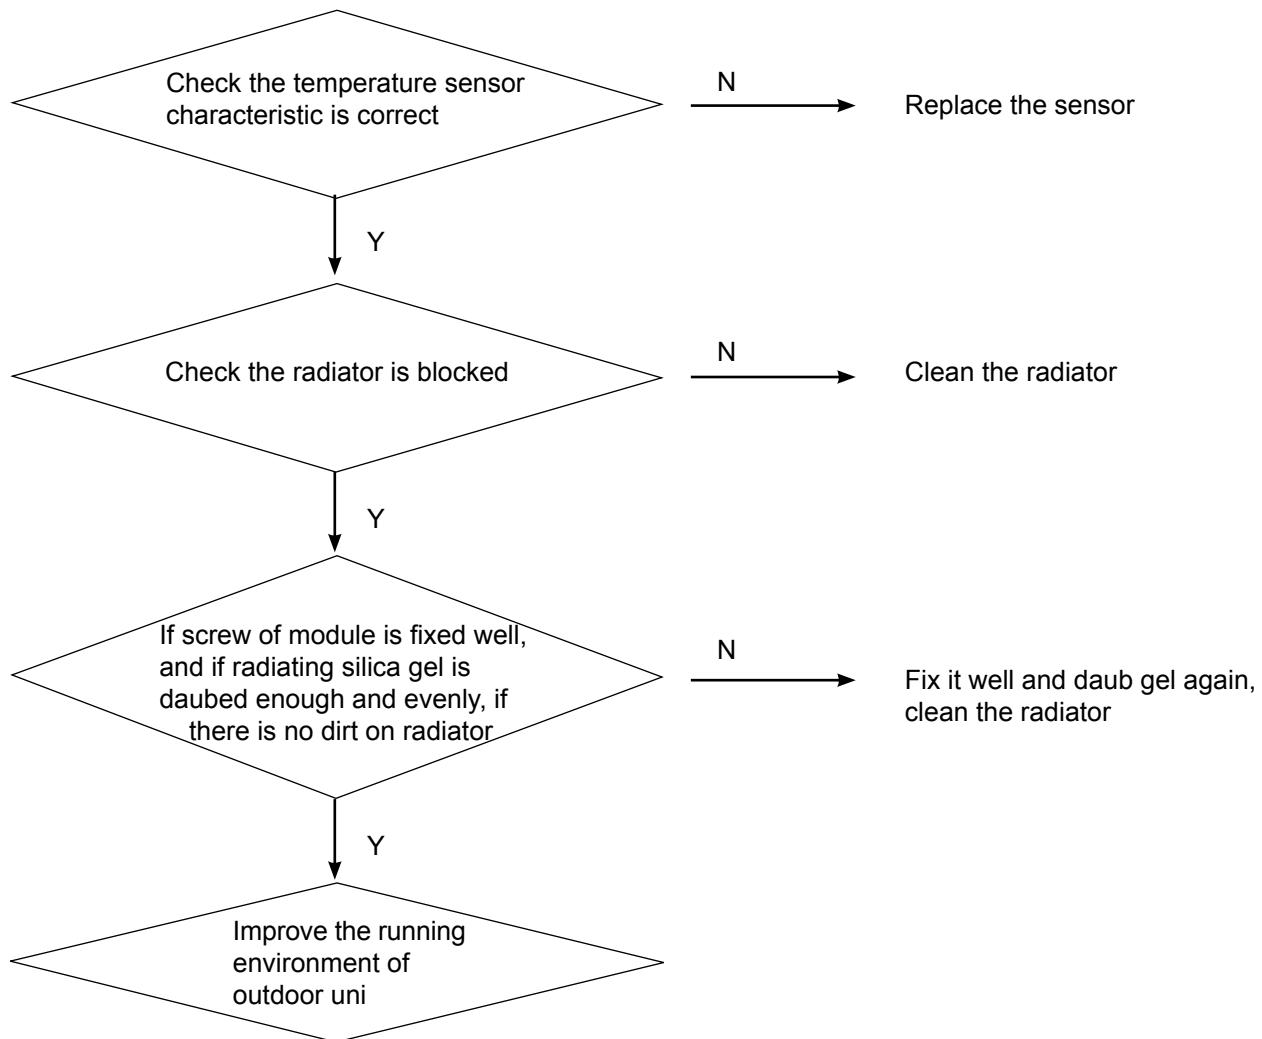

[123] Transient over current in IPM module rectifier side hardware

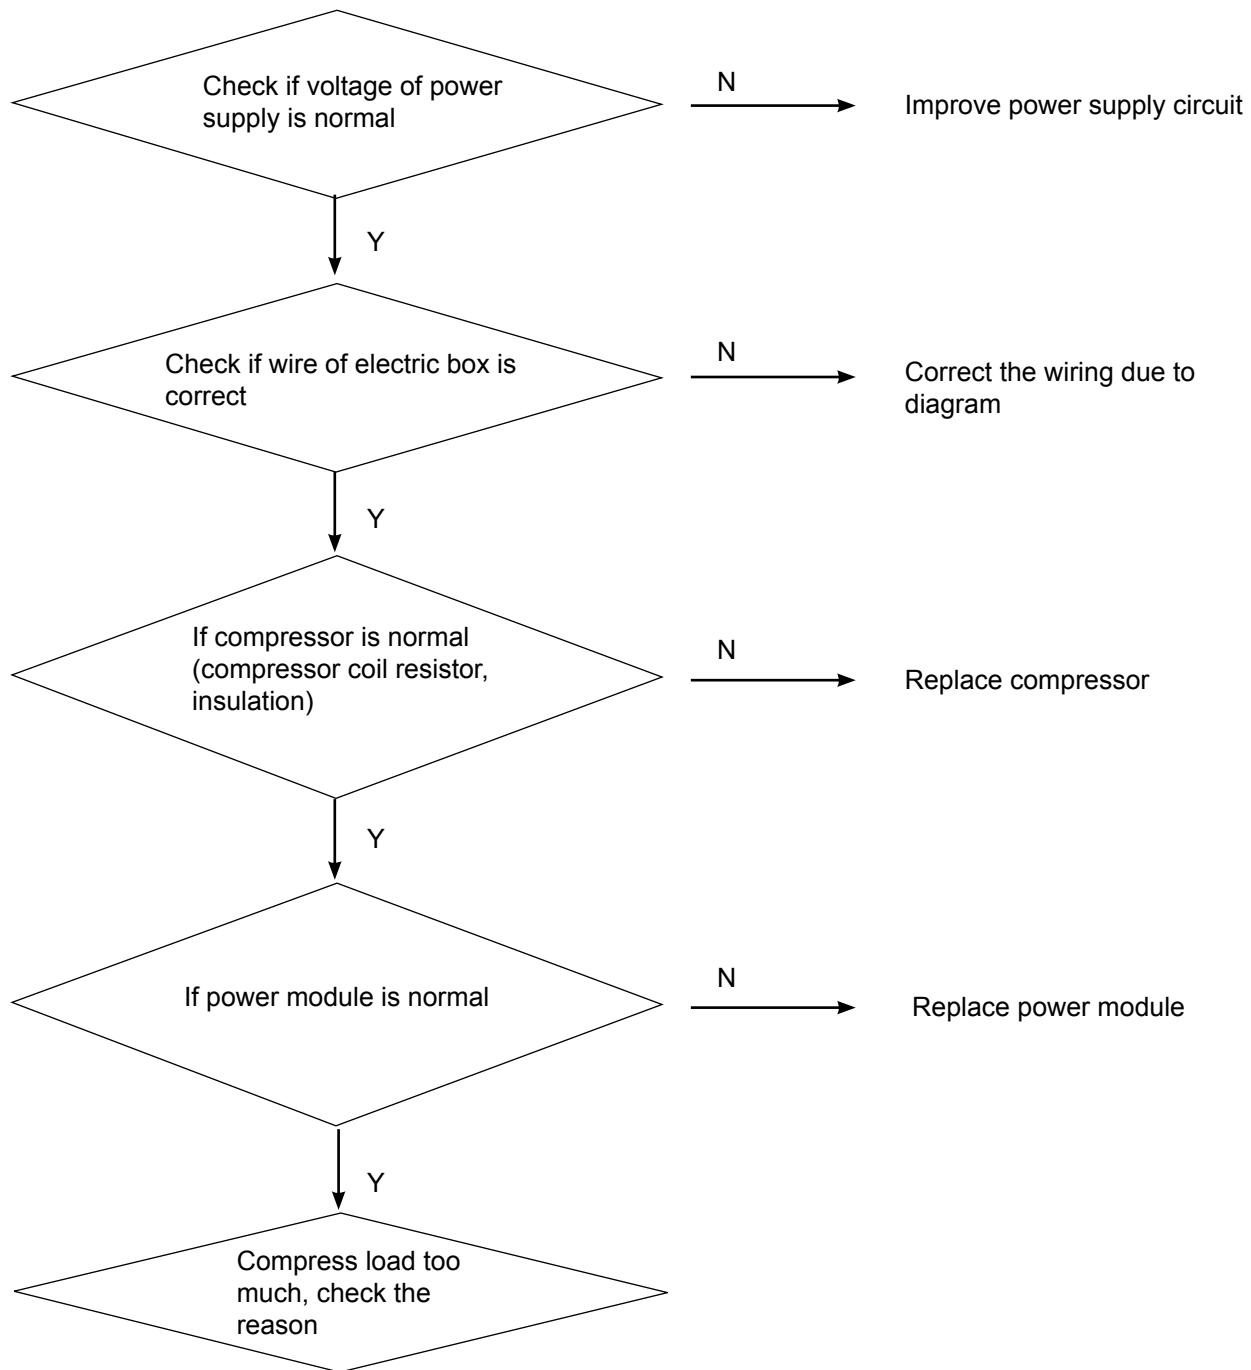

[111] Compressor out of control
[118] The compressor start failure

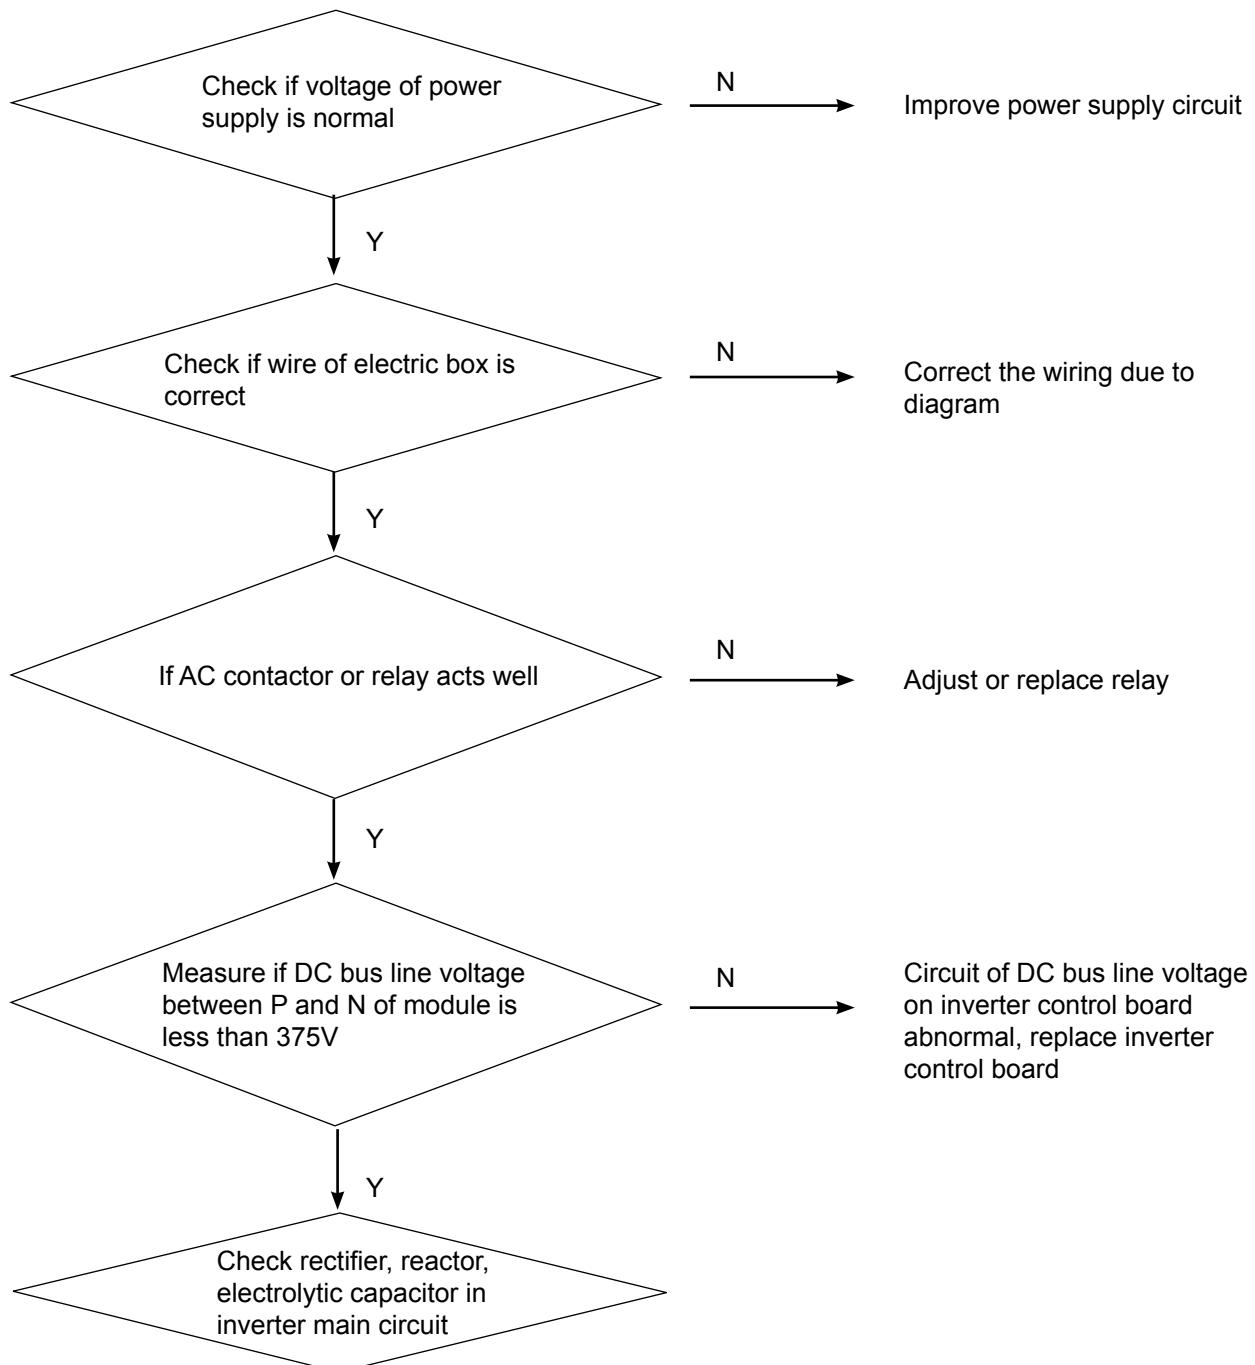

[112] Radiator temp. of transducer too high; [81] IPM module temp. too high

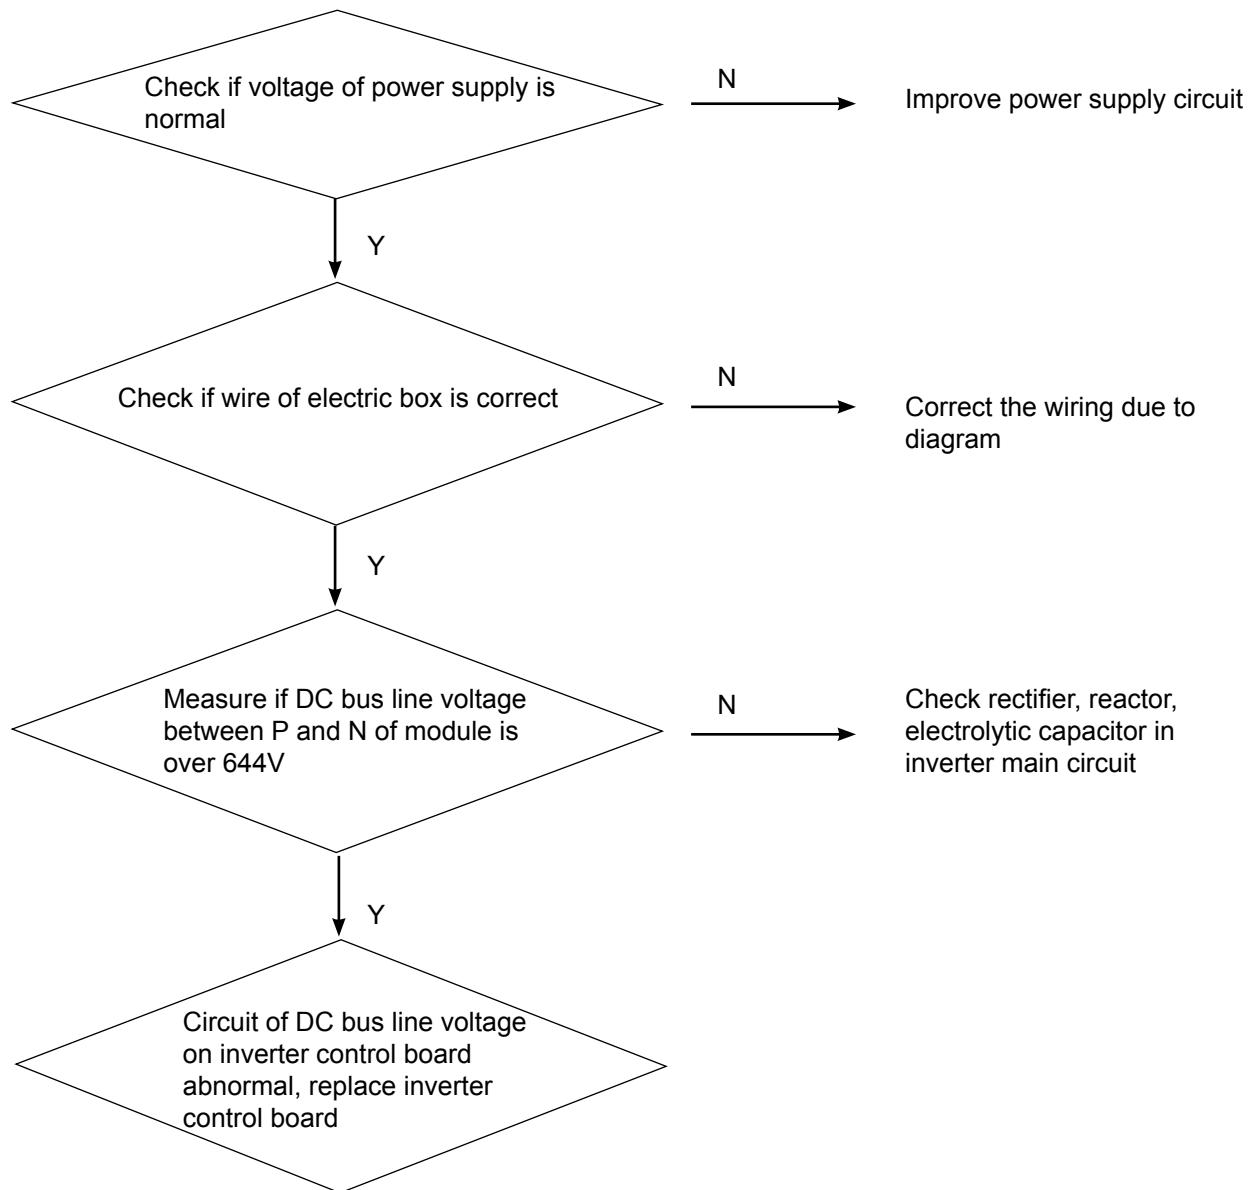

[113] Protection of overload

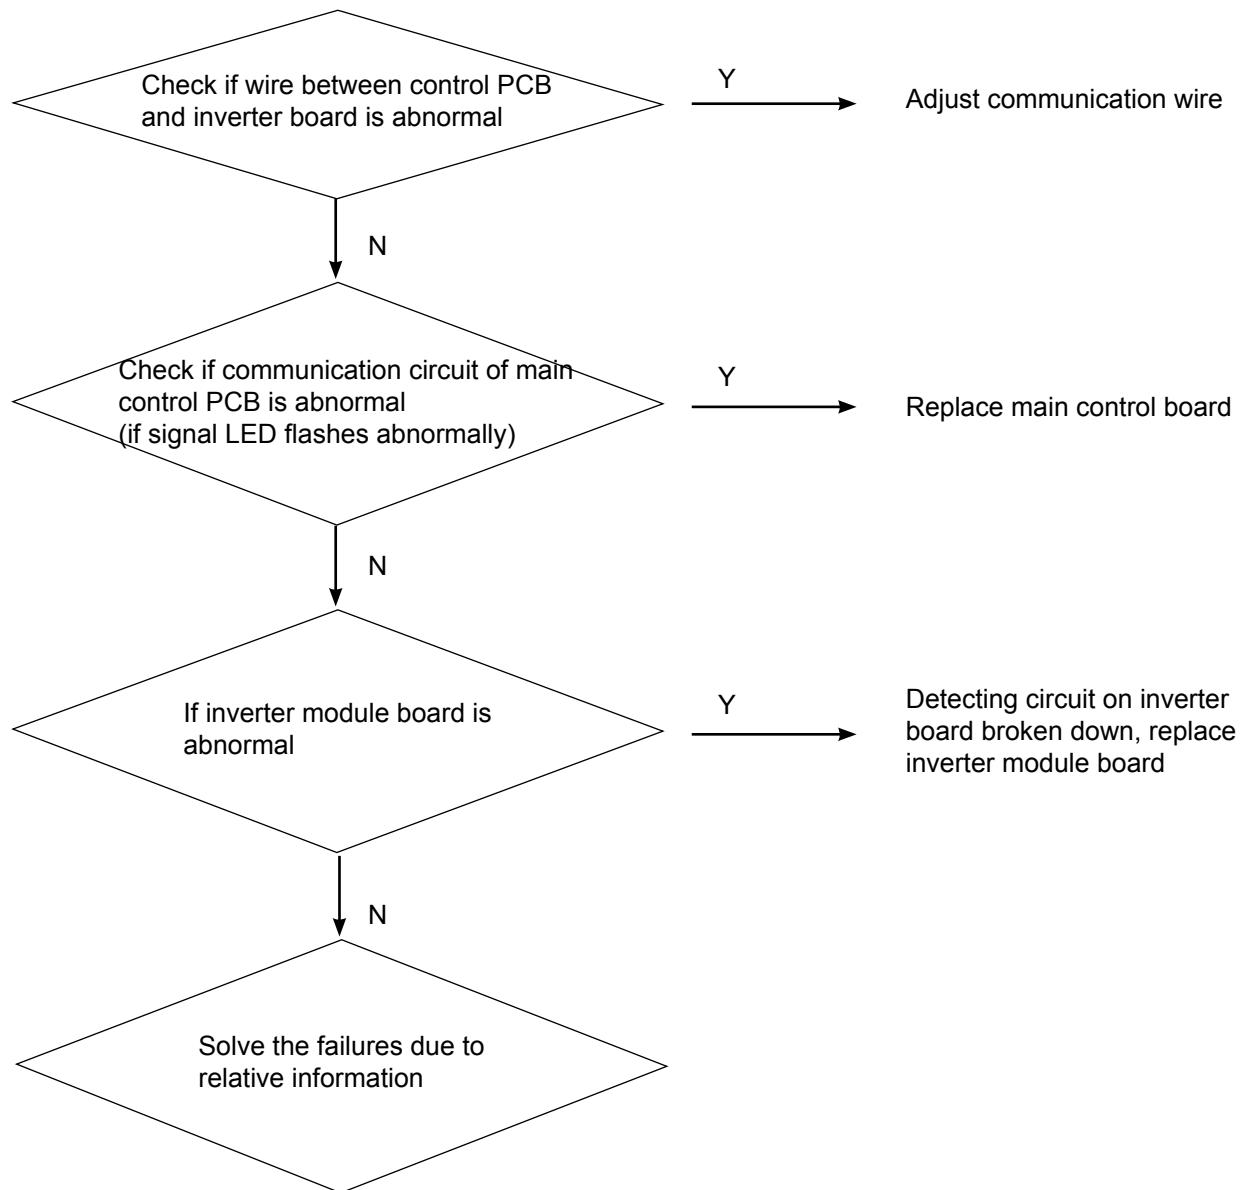

[114] Voltage too low of DC bus line of transducer

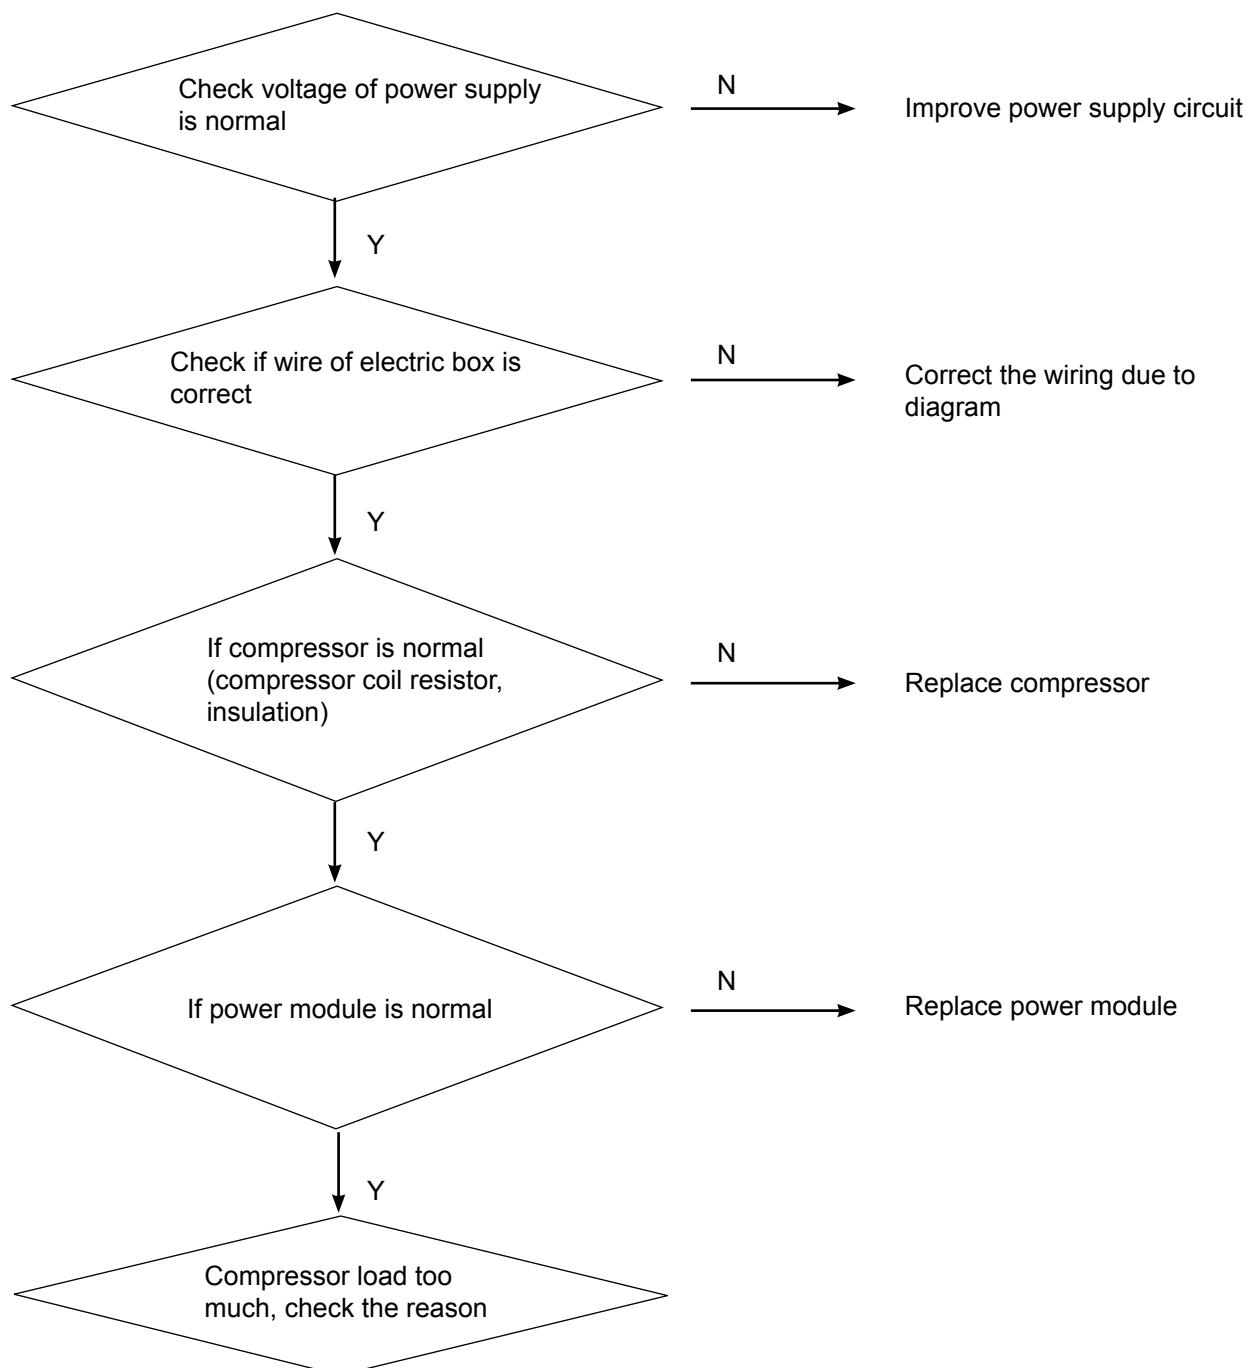

[115] Voltage too high of DC bus line of transducer

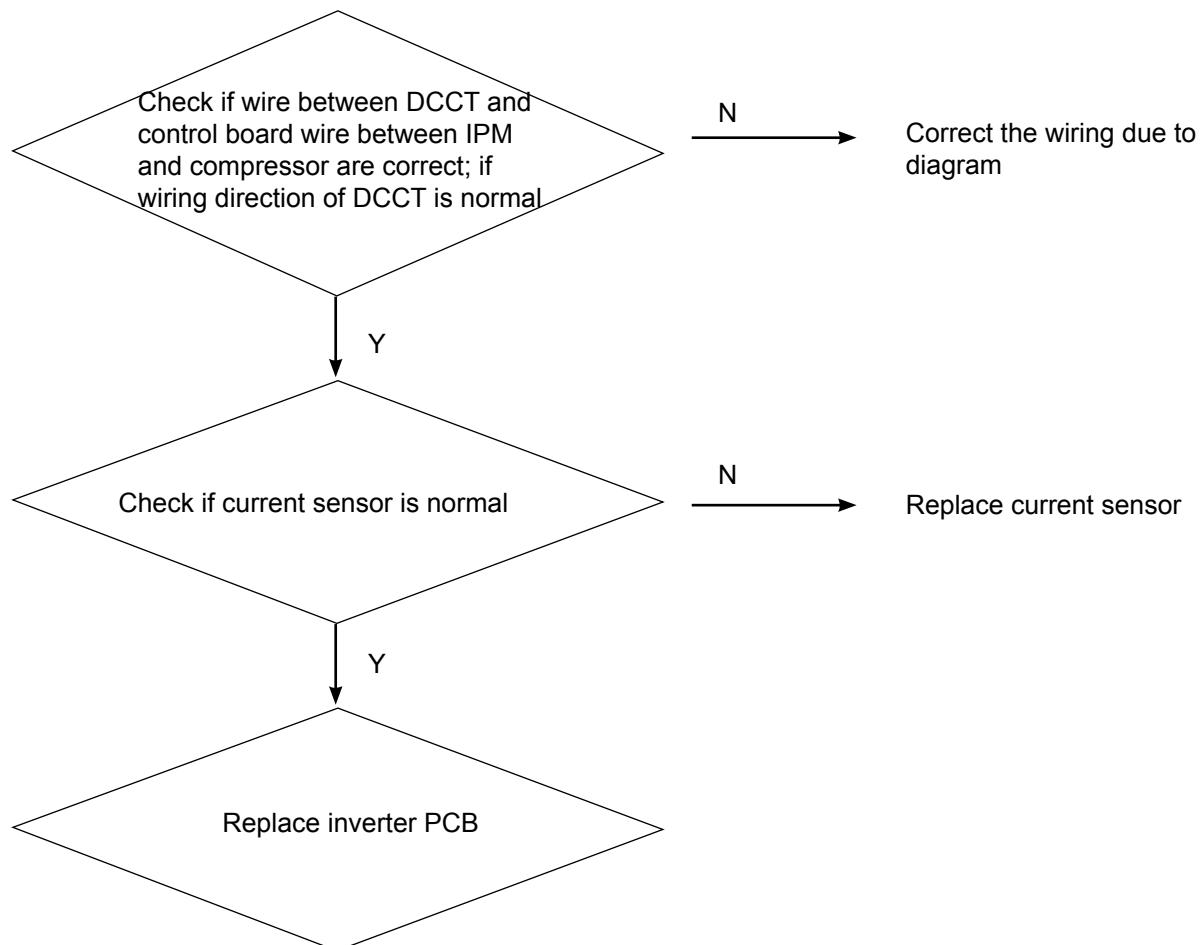

[116] Communication abnormal between transducer (inverter module board) and control PCB

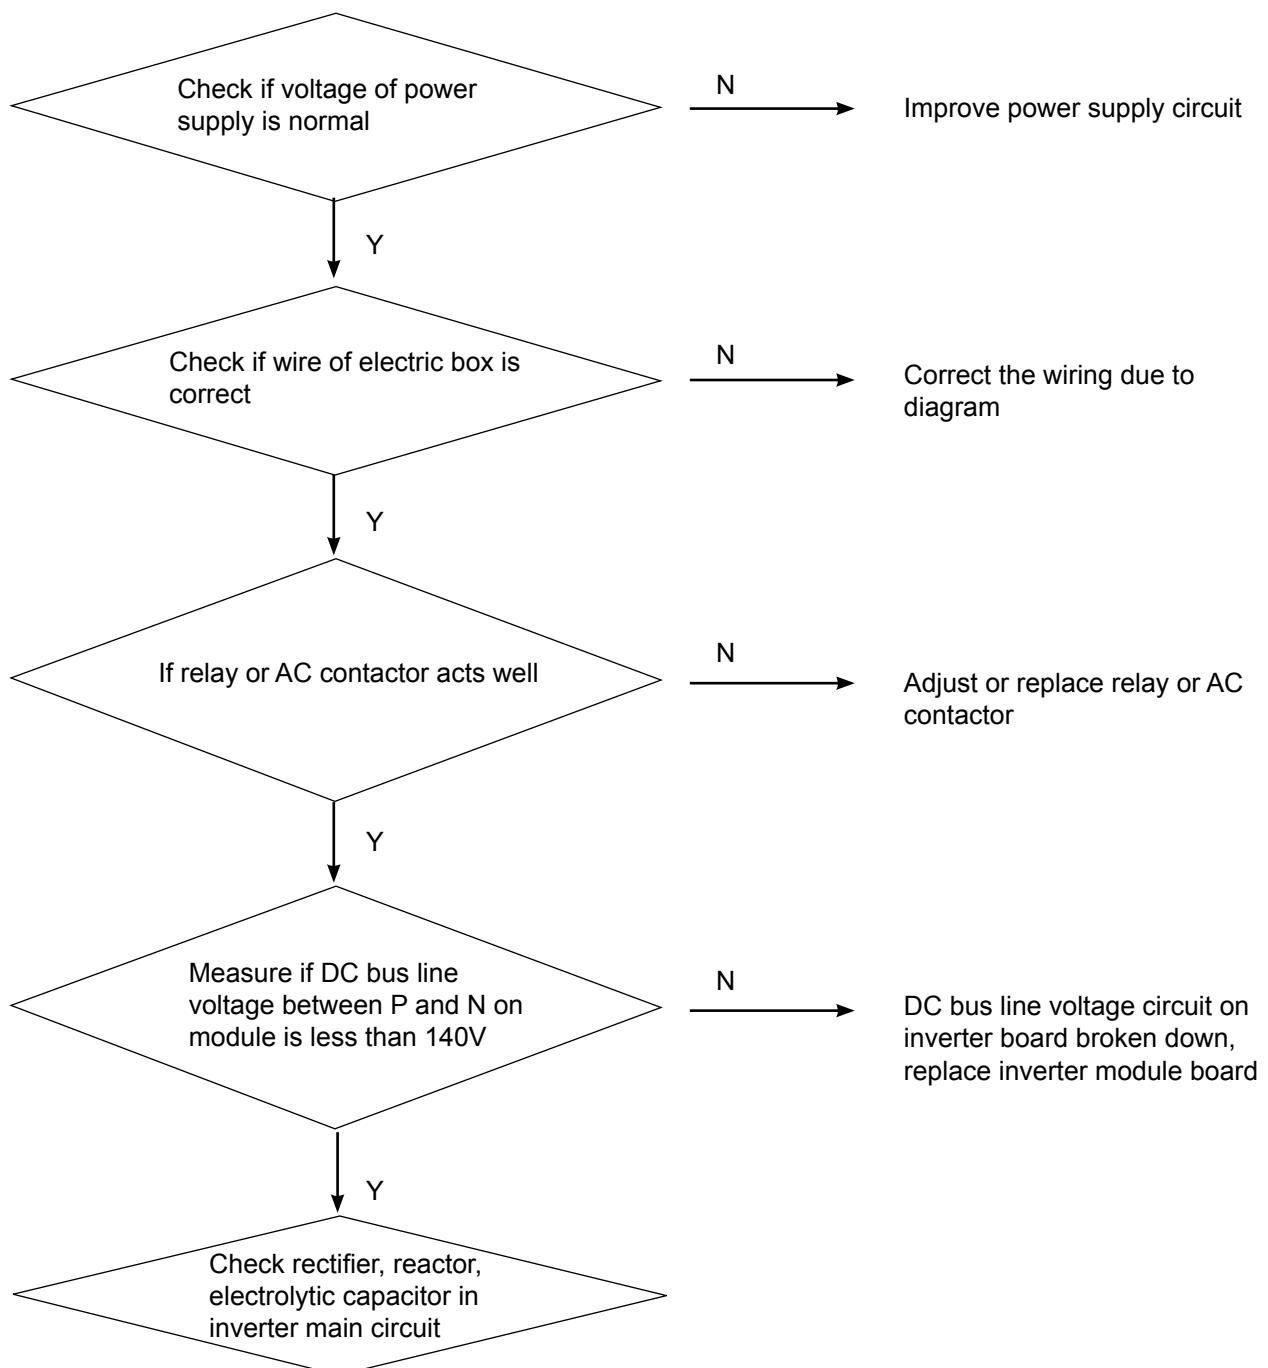

[117] Transducer over current (software protection)

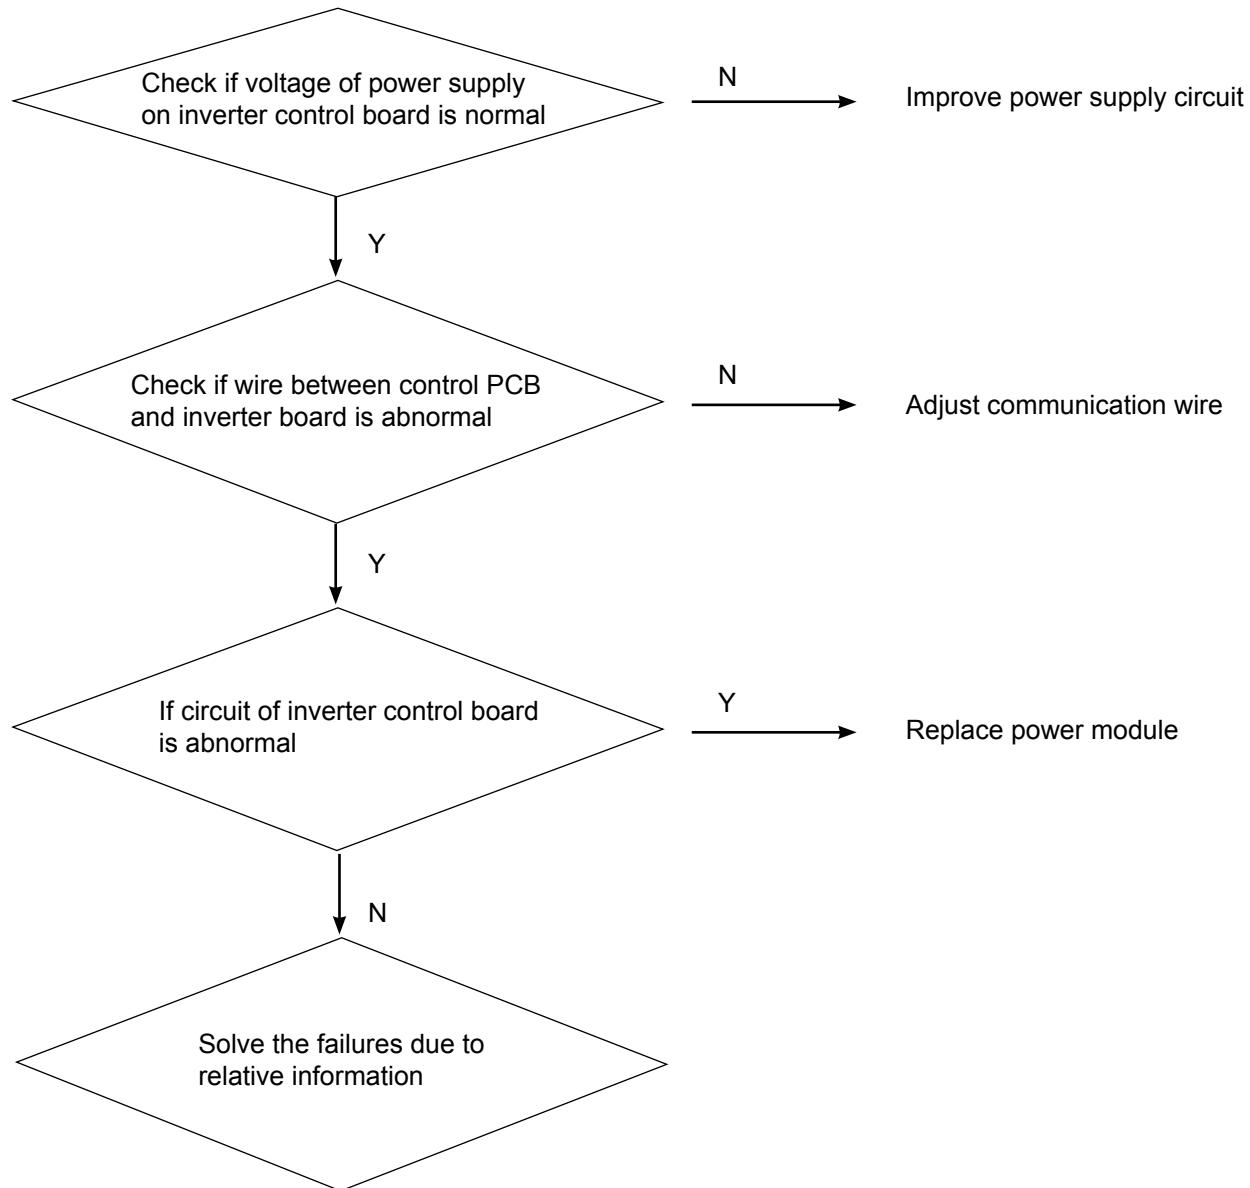

[119] Current detection circuit of transducer is abnormal

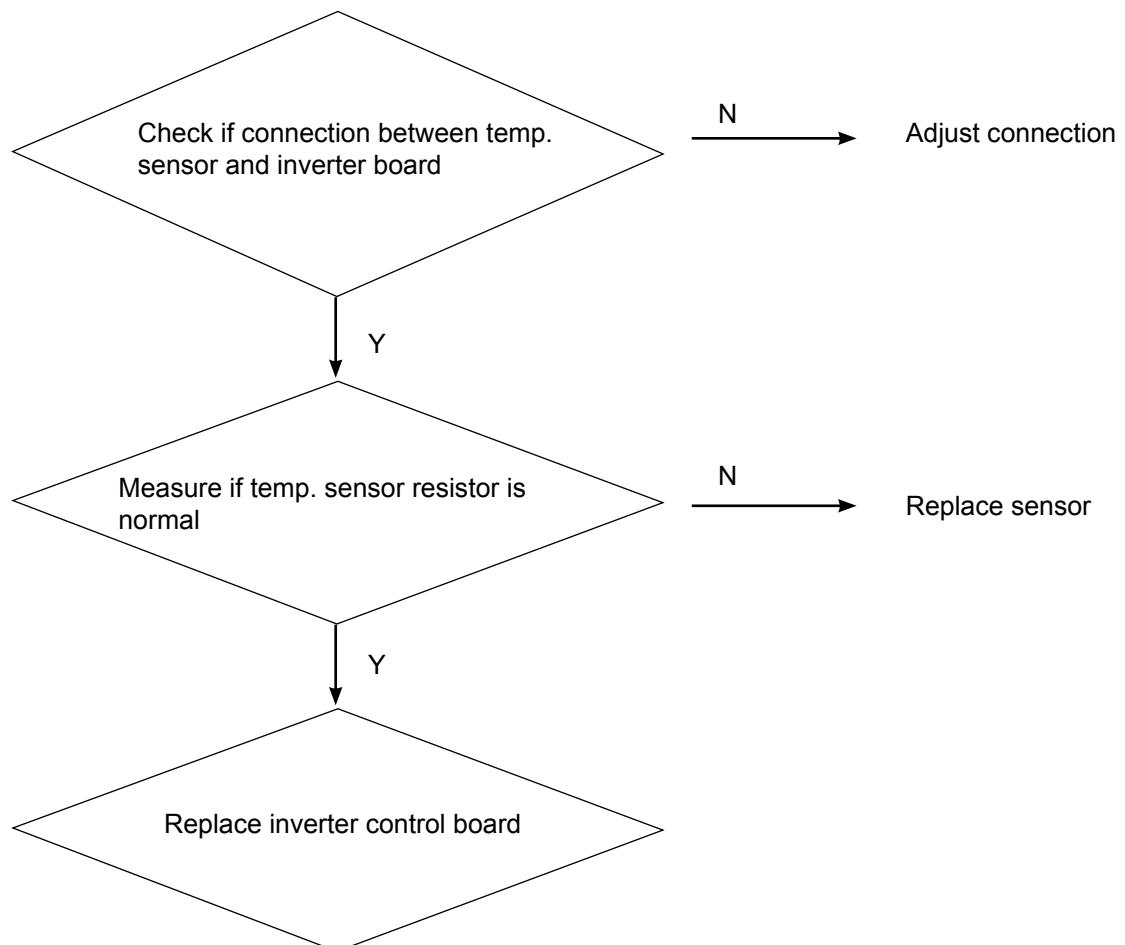

[120] Power supply of transducer abnormal

[121] Power supply of inverter board is abnormal

[122] Radiator temp. sensor of transducer abnormal

22. APPENDIX Sensor Resistance Table
